6.1.7 Fact: Rewriting each word with Abjad numbers until and from Iron verse

In this chapter, I present two interesting codes around iron verse as *facts*.

The common coding pattern of each of the two codes is that they are based on rewriting the Arabic text of the verses of Quran by replacing the Abjad number of each word as seen on the text. Abjad number of a word is calculated by summing the Abjad numbers of each letter in a word. All the verses have *chapter and verse indexes*, which are from chapter 1 to 114 along with their special verse indexes. This means this code pattern is like rewriting the verses of Quran by replacing each of Abjad numbers of words as seen on the text. These two codes are complementing each other such that code 1 rewrites, as described, from first verse till the Iron verse (inclusive), and code 2 rewrites from the Iron verse (inclusive) till the end of Quran.

Code 1: The first code is that when we rewrite all the verses of Quran from the first verse till the verse of Iron (al-Hadid), including the Iron verse, as explained above, the resulting big number code is multiple of 26. This code is similar to the *Code 2* of Evidence 6.1.5. But, the difference is that, in that code, we observed the code pattern with Abjad sequence of letters and also with *general verse indexes*. In this Code 1, we have similar rewriting code again till the iron verse but we use Abjad numbers of words along with chapter and verse indexes and also number of words.

Code 1 coding pattern:

[Chapter and special verse index of the Iron verse and number of words in verse | Abjad values of each word in the Iron verse replaced at the place of the words on the text] ... [Chapter and special verse index of the second verse and number of words in the verse | Abjad values of each word in the Iron verse replaced at the place of the words on the text] [Chapter and special verse index of the first verse and number of words in the verse | Abjad values of each word in the Iron verse replaced at the place of the words on the text]

Code 2: The second code is that when we rewrite all the verses of Quran from the verse of Iron (inclusive) till the end of Quran as described above, the resulting big number code is multiple of 26. This code is similar to the *Code 3* of Evidence 6.1.5. But, as explained before, the difference is that, in that code, we observed the code pattern with Abjad sequence of letters and also with *general verse indexes*. In this Code 1, we have similar rewriting code again from the iron verse till end but we use Abjad numbers of words along with chapter and verse indexes and also number of words.

Code 2 coding pattern:

[Chapter and special verse index of the last verse and number of words in the verse | Abjad values of each word in the Iron verse replaced at the place of the words on the text] [Chapter and special verse index of the verse 6235 and number of words in the verse | Abjad values of each word in the Iron verse replaced at the place of the words on the text] ... [Chapter and special verse index of the Iron verse and number of words in verse | Abjad values of each word in the Iron verse replaced at the place of the words on the text]

The two codes, Code 1 and Code 2, are presented below in order.

```
x<- nQuran # 6236 numbered verses
ii <- which(x$chapter== 57 & x$verse==25)
RmHamza=T
j <- which(x$verse==0)
y <- x
tmpl <- str_split(x$text, " ")

tmp <- c()
for(i in 1:length(tmpl)){
  tmpi <- unlist(tmpl[i])
  tmp <- c(tmp, paste0(
    rev(AbjadSeqofaWordSumValue(tmpi,rmHamza_ = RmHamza,
      abjadL_=abjadL, abjadN_=abjadN2) ),
    collapse = "" ))
}
```

```

}
# Chapter and verse indexes added
tmp1 <- paste0(y$chapter,y$verse,y$vwords, tmp)

# Code 1: Till, including, the Iron verse.
tmp <- c(tmp1[1:(ii)])
tmp <- rev(tmp) # reverse order of verses
tmpc1 <- paste0(tmp, collapse = "")
print("Testing the mod 26 for the code 1 number until, including, iron
verse:")

## [1] "Testing the mod 26 for the code 1 number until, including,
iron verse:"

as.bigz(tmpc1) %% 26

## Big Integer ('bigz') :
## [1] 0

print("The number of digits of the code 2, including iron verse: ")

## [1] "The number of digits of the code 2, including iron verse: "

print(nchar(tmpc1))

## [1] 213824

print("Fact: The number of digits of the code 2, including iron verse,
is also multiple of 26 as tested here: ")

## [1] "Fact: The number of digits of the code 2, including iron
verse, is also multiple of 26 as tested here: "

as.bigz(nchar(tmpc1)) %% 26

## Big Integer ('bigz') :
## [1] 0

# Code 2: Till the end of Quran, from, including, the Iron verse.
tmp <- c(tmp1[ii:length(tmp1)])
tmp <- rev(tmp) # reverse order of verses
tmpc2 <- paste0(tmp, collapse = "")
print("Testing the mod 26 for the code 2 number till the end of Quran,
from, including, the Iron verse:")

```

```
## [1] "Testing the mod 26 for the code 2 number till the end of
Quran, from, including, the Iron verse:"

as.bigz(tmpc2) %% 26

## Big Integer ('bigz') :
## [1] 0

print("The number of digits of the code 2, including iron verse: ")

## [1] "The number of digits of the code 2, including iron verse: "

print(nchar(tmpc2))

## [1] 26256
```

6.1.8 Additional Facts on Iron and Quran

I will present some other additional facts in this chapter. I do not consider them as evidence but provide them here for further discussions.

Fact 1:

First code as a fact is such that, If we replace each letter with its corresponding Abjad number until the word iron and then this text representation number is concatenated with the chapter and verse index, without the number of words and in reverse order, then the resulting number is also multiple of 19 as follows:

```
x<- unQuran
tmp1 <- str_split(x$text, " ")
i<- 5155 # General verse index in 6348 for verse 57:25, the hadid
verse.
tmpi <- unlist(tmp1[i])
tmp <- AbjadSeqofwordspersVerse(tmpi[1:13], rev_ = T)
tmpr <- rev(tmp)
tmpr <- paste0(tmpr, collapse = "")
# Concatenate 5725 and the Abjad numbers of 76 letters:
tmpr <- paste0(5725,tmpr)
print("The 129 digits length coding number: ")

## [1] "The 129 digits length coding number: "

print(tmpr)
```

```
## [1]
"572541048301150307501696010030126015030140610010305017104030162140020
301405704015030750164001501023012150306020015030602001410030"

# Test the 129 digits length number for mod 26 and see if 0.
as.bigz(tmpr) %% 26

## Big Integer ('bigz') :
## [1] 0

print("The number of digits of the big coding number: ")

## [1] "The number of digits of the big coding number: "

print(nchar(tmpr))

## [1] 129
```

Fact 2, The isotopes of iron:

These are the 4 isotopes of iron: 54Fe, 56Fe, 57Fe and 58Fe. When the 4 of the isotopes of iron are concatenated in natural order, from low to high, we get this representation coding number:

54565758

This big number is multiple of 26, multiple of 19, multiple of 114 and also multiple of 19x26.

```
tmp <- "54565758"
as.bigz(tmp) %% (26*19)

## Big Integer ('bigz') :
## [1] 0
```

6.2 Codes on the Basmala verse

I will present some interesting 19 based codes as **facts** about the special verse, Basmala, in the sections of this chapter. I excluded this chapter from the probability calculations of the general system in this book as I currently designated those codes as **facts** rather than evidences. So, one should not consider them as part of the general system presented in this book but consider them as interesting codes as *facts* about the Basmala verse only.

The key verse Basmala is written at the beginning of all the 113 chapters but Chapter 9 out of the 114 (19x6) chapters of Quran. No one really knows exactly, why there is no Basmala

verse in the beginning of Chapter 9 out of all the 114 chapters. But the text structure of Quran has this odd and unique situation and after witnessing all the evidences so far, I conclude that this might be another sign of the unique design of the text of Quran. Because, otherwise almost all the evidences would collapse. Considering the many evidences I presented so far, we now know that it is required such that there must be no Basmala at the beginning of Chapter 9 as otherwise most of the presented 19 based system evidences of the text of Quran, presented in this book, would most probably be invalid. This odd situation of the absence of Basmala verse at the beginning of Chapter 9 further assures that the 19 based coding system design of the full text of Quran.

Basmala has many 19 based coding proposals already known about it in the literature. In this chapter, I will present new codes that I realized myself while working on this book and did not see anywhere else. So, all the Basmala codes within this book are first time presented to the literature in this book to the best of my knowledge.

Since the main point of this book is to present reproducible 19 based codings of the text of Quran, let's get the Basmala verse first from the text. I presented all the unique words of Quran in Table 3.1 in Chapter 3.1.5.1. Let's see the head of this table again. Because the Chapter 1 and Verse 1 is Basmala verse already from which we can get this special Basmala verse and its four words along with their word frequencies in Quran.

```
require(tm)

## Warning: package 'tm' was built under R version 4.3.3

## Warning: package 'NLP' was built under R version 4.3.3

knitr::kable(head(uwordsTable), booktabs = TRUE,
  caption = 'Table head of the unique words of Quran.')
```

Table 6.1: Table head of the unique words of Quran.

uwords	count	countW	uletters
من	2763	2763	2
الله	2153	2265	4
في	1185	1185	2
ما	1010	1010	2
إن	966	966	2
لا	812	812	2

As we see in the above table, the first four rows of the table contains the four words of Basmala. Three of them are the different names of God (“Allah” (or God), “the Gracious”, “the Compassionate”) and the first word (“In the name of”) refers to them as “In the name of God, the Gracious, the Compassionate”. Basmala is a very special verse and unique regarding all the other verses. It is the first verse of Quran as if it is the opening or key. Before starting to recite any chapter, Muslims first recite Basmala verse as the opening. Let’s introduce the first evidence on Basmala verse.

Basmala words frequency table:

Although Basmala is a very short verse with only 4 words, there are many 19 based codings on just Basmala verse that are already known, such as the number of its letters is 19. In this chapter, I will first present the one about the frequency of its words in the full text of Quran, which I discovered while writing this book. Let’s first slice a separate table on just Basmala from the above Table 6.1

```
B <- BasmalaTable
summ <- c(sum(B$count), sum(B$countW), sum(B$uletters))
knitr::kable(BasmalaTable, booktabs = TRUE,
  caption = 'Table of the unique words of Basmala verses in Quran.')
```

Table 6.2: Table of the unique words of Basmala verses in Quran.

uwords	count	countW	uleters
الله	2153	2265	4
الرحمن	45	157	6
الرحيم	34	146	6
بسم	3	115	3

```
cat("The sum of each of the first three columns:")
```

```
## The sum of each of the first three columns:
```

```
cat(t(as.data.frame(summ)))
```

```
## 2235 2683 19
```

Before going further, let's just mention one of the test results from the table for one of the very well known evidence on Basmala verse. Basmala verse has 19 letters as we see in the sum of the fourth column that shows the sum of the letters of each words in Basmala.

6.2.1 Fact: Cumulative number of letters and indexes from Basmala verse

In this coding pattern, the number of letters of each word of the Basmala verse is cumulatively summed and word indexes are placed before each word and all are concatenated as follows:

```
# Define a function to be used for this coding pattern:
# It concatenates cumulative numbers and indexes of each word.
```

```
cumsumWtIndx <- function(a){
  # usage:
  # Example input: a <- c(8,7,2,3)
  # cumsumWtIndx(a)
  # output: "18" "215" "317" "420"
  cumulative_sum <- cumsum(a)
  index <- 1:length(a)
  b <- paste0(index,cumulative_sum)
  return(b)
}
```

```
### Start coding
```

```

x<- nQuran # 6236 verses
tmp1 <- str_split(x$text, " ")
tmp <- c()
for(i in 1:length(tmp1)){
  tmpi <- unlist(tmp1[i])
  tmp <- c(tmp, paste0(cumsumWtIndx(nchar(tmpi)), collapse = ""))
}

print("The coded number of Basmala verse: ")
## [1] "The coded number of Basmala verse: "

# First verse is Basmala and should be: "1327313419"
print(tmp[1])
## [1] "1327313419"

print("Test for mod 19 to see if zero: ")
## [1] "Test for mod 19 to see if zero: "

as.bigz(tmp[1]) %% 19

## Big Integer ('bigz') :
## [1] 0

```

In the coded number of Basmala, note that the first 1 is the index of the first word and the following 3 is the number of letters of the first word of Basmala, which is *Bsm*. You can follow the rest yourself from this example.

This coding pattern was shown to exist over the Basmala verse by Abdullah Arık in his book “Beyond Probability” (2012). Since this code does not include any data manipulation, I took this particular one seriously and tested it over the full text of Quran. I observed that this coding pattern is multiple of 19 in the full text of Quran (6236 numbered verses) too. I considered this as potential key coding pattern and tested over the full text of Quran (6236 numbered verses) and found that the same coding pattern also exist in the full text of Quran considering all the 6236 numbered verses. However, since there are not much similar codes, I consider it as a fact rather than an evidence. Here is the proof of this code being multiple of 19 in the full text of Quran of 6236 numbered verses:

```

print("Coded initial verses of Quran: ")
## [1] "Coded initial verses of Quran: "

```

```

print(head(tmp) )

## [1] "1327313419" "1528310418" "16212"          "1427312"
"1428313419"
## [6] "15211319"

print("Coded last verses of Quran: ")

## [1] "Coded last verses of Quran: "

print(tail(tmp))

## [1] "122639414"      "1328"           "1328"           "1224311417"
## [5] "1429311415520" "1227313"

tmp <- paste0(tmp, collapse = "")
print("The number of digits of the coded number of 6236 verses:")

## [1] "The number of digits of the coded number of 6236 verses:"

print(nchar(tmp))

## [1] 259820

print("Test for mod 19 to see if zero: ")

## [1] "Test for mod 19 to see if zero: "

as.bigz(tmp) %% 19

## Big Integer ('bigz') :
## [1] 0

```

Here is the 259820 digits length big number:

```

"132731341915283104181621214273121428313419152113191429314419522629734

6.2.2 Other codes as facts on the Basmala verse

In the subchapters of this chapter, I will present the codes that I found myself but I could not see strong rule based patterns and thus present them as facts in this chapter.

Based on the number of words of Basmala and number of its letters, I will present reproducible codes just over the special Basmala verse. In Chapter 6.2.2.2 and Chapter 6.2.2.1, I will test the total number of words of Basmala. There are two numbers with respect to the sum of the number of all the 4 words of Basmala, which are 2235 and 2683. 2235 is for the sum of the number of the 4 words on the 6236 numbered verses of Quran and 2683 is for the numbered and unnumbered 6348 verses together in the full text of Quran. Considering the pairing coding pattern, we combine numbers of both category by concatenating. Since there are only two numbers in this case, the only combinations of pairings are 22352683 and 26832235. So, in total, there are four numbers to be tested (2235, 2683, 22352683, 26832235). The reason I take the sum of the numbers of the 4 words of Basmala is because I am testing evidences on Basmala that consists of the 4 words. Considering individual words from the 4 words of Basmala is not that meaningful because what makes Basmala is the combination of the 4 words together. Also the 4 words

of Basmala do not only appear in the Basmala verse but also in the other verses independently from each other. This approach would show the integrity and harmony of Basmala within the full text of Quran.

6.2.2.1 Fact on Basmala words with pairing

22352683

The total number of the words of Basmala in the numbered verses of Quran is 2235 and in the unnumbered and numbered verses (whole Quran) is 2683 as counted in Chapter 6.2. There are two concatenation combinations of these numbers as discussed in Chapter 6.2, one of which is 22352683. This number, 22352683, that combines the total frequencies of the words of the Basmala in both types of the text of Quran, is multiple of 19 as shown below:

```
as.numeric(as.bigz(22352683) %% 19)
```

```
## [1] 0
```

Regarding the proof, I already generated these two numbers from Table 6.1 in the previous chapter, Chapter 6.2. One can visit and reproduce these numbers if wished.

6.2.2.2 Fact on Basmala words with digit sum

2683

The sum number of all the words of Basmala is 2683 and the digit sum of this number is exactly equal to 19. This number represents the total number of all the 4 words in the whole Quran, including numbered and unnumbered verses. Regarding the proof, I already generated this number 2683 from Table 6.1 in the previous chapter, Chapter 6.2. One can visit and reproduce this number if wished.

6.2.3 Fact on individual Basmala words in the full text of Quran

3215345341152265157146

When we concatenate all the frequencies of each words of Basmala in numbered verses and also all the verses of Quran, we get this 20 digit length number. You can manually perform it yourself from the Basmala table given above, where you need to concatenate the 4 numbers of the column *count* and the other 4 numbers of the *countW*. In this **fact**, we observe that the digit sum of this large number is multiple of 19. Therefore the order of numbers does not matter. The digit sum of this large number is exactly 76, which is 19x4. This is even more interesting as Basmala verse has 4 words and 19 letters and this coding decomposes as 19x4. We observed that all the words of the special verse Basmala not only in harmony

together but also in harmony with a single Basmala that has 19 letters and 4 words. Here is the proof for the digit sum of this large number.

```
tmp1 <- paste0(BasmalaTable$count, collapse = "")
tmp2 <- paste0(BasmalaTable$countW, collapse = "")
tmp <- paste0(tmp1,tmp2)
digitsum(tmp)

## [1] 76
```

6.2.3.1 Facts on individual Basmala words

As we have studied so far, there are 4 words in Basmala. I also looked at its words individually to see if they have meaningful relation to 19 system and I observed this code.

Before starting explaining this **fact**, let me give this information first. Out of those 4 words, Allah and Al-Rahman can be used uniquely for God as names and can be used interchangeably as stated in the following verse. The verse 17:110, which specifically mentions the other name of God, Al-Rahman (The Most Compassionate/The All-Merciful), along with Allah word, which suggests this conclusion.

“Say to them (O Prophet!):”Call upon Him as Allah or call upon Him as al-Rahman; call Him by whichever name you will, all His names are beautiful. ...”, (17:110), Quran.

So, considering this verse, we might expect a similar coding pattern between Allah and Al-Rahman but not with others.

Although there are some disputes, the word Raheem in the Al-Raheem of the Basmala verse is considered permissible to be used for humans as well. I am not an expert on this topic but aware of this dispute. Feel free to do your own research on this topic if you wish. The last word “Bism” is already not a name of God and not considered in these trials.

Back to the main point, in this code I will present the identical 19 based coding pattern that we observe on the two special words of Basmala, Allah and Al-Rahman. In this pattern, for each word, I concatenate their total word counts of these words and their number of letters. The digit sum of each of these resulting numbers are exactly 19. The rationale behind this approach is that, the number of letters in a word keeps a unique additional information for the word of interest. Therefore, testing a word count along with its number or letters might also be a meaningful approach. Here are the numbers for each word.

The word Allah has been used in the Basmala verse in this form

الله

for exactly 2265 times and it has 4 letters. We first concatenate the word count and the number of letters of that word and get the number to be tested as follows:

For the word, Allah, the digit sum of this representation number is exactly 19:

$$2+2+6+5+4 = 19.$$

If this was a single observation, I might have not considered this observation as much interesting. However, the second exclusive word of the Basmala verse, Al-Rahman (الرحمن), has also the exact same coding pattern, which suggests that it might be a common pattern of a code system. The word, Al-Rahman, has been used 157 times and it has 6 letters, which yields the number to be tested as 1576. Then we have the digit sum of it again as exactly 19.

$$1576 = 1+5+6+7 = 19.$$

Since these two words are exclusive names for God only, it appears to be meaningful to witness such a common pattern.

I will still **not** add these codes into the global counters of the evidences of this book that are used for the global probability of the 19 based system presented in this book. However, let's calculate the probability of this particular evidence alone. For each names, we applied two tests. Therefore, overall, we have 2 successes out of 4 tests, considering the two text types, which results the following probability:

```
tmp <-binom.test(2, 4, p = (1/19),
                 alternative = c("greater"))
tmp <- formatC(tmp$p.value, format = "e", digits = 2)
cat(paste("The probability of 2 success out of
          4 tests (with p=1/19) is:", tmp))

## The probability of 2 success out of
##          4 tests (with p=1/19) is: 1.55e-02
```

6.2.3.2 Known codes on Basmala letters

Basmala verse itself alone is apparently aligned with the verse on the 19 that is “74:30. Over it is Nineteen”. I presented the number of letters of each of the 4 words of Basmala in the fourth column (column name “u.lengths”) of Table 6.1 in Chapter 6.2. As it can be counted manually from the table, the total number of letters of Basmala is 19 and thus Basmala alone has a strong relation to the 19 based coding system of the text of Quran. This also means that the total number of letters of all the 2683 Basmala words is also multiple of 19 since there are 114 total Basmala verses in Quran.

This fact was known from the beginning of the revelation of Quran and there is no need to reference it. However, it is worth mentioning that along with the number of chapters, 114, and the number of letters of Basmala, it might be left so apparent as clues of the 19 based coding system so that Muslims can imagine researching on this direction and reveal the 19 based coding system of the text of Quran.

6.2.3.3 Known codes on the number of Basmala verses

There are in total 114 Basmala verses in Quran and it is multiple of 19. This may be considered as self-evident fact by Muslims but it is not easy to test manually if you are not keep reading Quran in Arabic. Because, there are 113 Basmalas at the beginning of each chapter but there is no Basmala at the beginning of Chapter 9. So, where is the last Basmala to get the number 114? As an ordinary Muslim, I was not even aware of this situation until I was investigating on number 19. While reading on this topic, I learned that there is one other Basmala within Chapter 27, verse 30. But, Chapter 27 consists of 93 verses and it is not that easy to find that Basmala verse within it as a slow reader in Arabic manually. Further, we have to check that there is no other Basmala verse as well in other chapters of the whole Quran. So, this is not easily testable information manually by someone who is not a good Arabic reader who does not frequently reads Quran in Arabic. Therefore, in the following I provide the reproducible proof of this fact that there are, in total, 114 Basmala verses in Quran, which is multiple of 19. In Chapter 3.1, I had assigned the special Basmala verse into R programming object 'Basmala'. I will search this text in the R object *quran* that keeps the text of whole Quran as follows:

#See verse 1 and 8 in the head of quran table for Basmala.

```
quran[1:9,]
```

```
##      VerseI chapter verse
text
##      <num>      <num> <num>
<char>
## 1:      1      1      1      بسم الله الرحمن الرحيم

#Get the indexes of Basmalas in each verse.

```
i<- grep(Basmala, quran$text)
```

See the length of indexes of Basmalas in the table.

```
length(i)
```

```
## [1] 114
```

As we witnessed, there are really only 114 Basmala verses in whole Quran. This was a well known fact but here, a reproducible computational test to prove this fact is provided to the literature.

6.3 Overall probability of all the evidences so far

Below I will calculate the probability of all the 19 based evidences so far in this book using the global counters I have been counting. The below calculations do not include any iron related evidences presented in Chapter 6.1. If we also consider also the iron related evidences, the probability would be around million times less probable than the results approximately calculated.

```
tmp <-binom.test(global_success_nums,
                 global_tested_nums, p = (1/19),
                 alternative = c("greater"))
tmp <- formatC(tmp$p.value, format = "e", digits = 2)
print(paste("The probability of", global_success_nums,
            "success out of", global_tested_nums ,
            "(with p=1/19) is:", tmp))
```

```
## [1] "The probability of 43 success out of 99 (with p=1/19) is:
1.17e-28"
```

Again, If some cautious people think that we should have used more tests, although we tried **all** of them regarding the rules, I will not even look at the possible further successes in that case and keep the success number same but double the number of trials and see what would then be the overall probability so far. This should calm down those skeptical people.

```
tmp <-binom.test(global_success_nums,
                 global_tested_nums*2,
                 p = (1/19),
                 alternative = c("greater"))
tmp <- formatC(tmp$p.value, format = "e", digits = 2)
```

```
cat(paste("The probability of all the ", global_success_nums,
          "success out of all the", global_tested_nums*2,
          " tests (with p=1/19) is:", tmp))

## The probability of all the 43 success out of all the 198 tests
(with p=1/19) is: 2.01e-15
```

If still not convinced, for extremely cautious people, let's also increase the trials by 4 fold and keep the successes the same!

```
tmp <-binom.test(global_success_nums,
                 global_tested_nums*4,
                 p = (1/19),
                 alternative = c("greater"))
tmp <- formatC(tmp$p.value, format = "e", digits = 2)
cat(paste("The probability of all the ", global_success_nums,
          "success out of all the", global_tested_nums*4,
          " tests (with p=1/19) is:", tmp))

## The probability of all the 43 success out of all the 396 tests
(with p=1/19) is: 7.36e-06
```

6.4 Fact: The unique numbers

This code shows that the number of all the unique words and their letters used in Quran has an interesting 19 based code in it. As a reminder, these unique words refer to the written version of the words without any *haraka* marks, 'rasm' in Arabic, and therefore it does not mean unique number of words when it is read. Because the text is written without the *haraka* marks and the computer can only count the written version of the text.

$$u, U$$

$$14870 - 80068$$

In Chapter 3.1.5, I provided reproducible open source codes that allow easily to reproduce and generate the 7 main descriptive numbers of the text of Quran and also provided the two unique numbers that are distilled from all the used words of Quran. Those two numbers are unique number of words (denoted by **u**) and also the number of letters of the unique words (denoted by **U**) of Quran. In total, all the 9 different descriptive numbers about the text of Quran can be reproduced in Chapter 3.1.5 from the text of Quran. The unique numbers **u** and **U** are not independent categories of the text of Quran but they are derived from all the used words and letters in Quran. In a sense, they are offspring of the words and letters categories, respectively, as they are dependent of the main descriptive numbers of the text

of Quran. Thus, they are treated as a separate category. These unique numbers are also important and that must be considered because it reflects the richness of the word set used in the book of God. I expected them to be coded under the 19 based coding system of the text of Quran and also designed together with all the 7 main descriptive numbers of the text of Quran and thus developed hypothesis and tested them as such.

Regarding the coding rule, I concatenate them in the natural order as well, which is first words and then the letters. This is the most basic universal rule I keep using while concatenating numbers, which is “the concatenation of the natural numbers in the natural order”. Both types of the text of Quran, with unnumbered verses and with only numbered verses, has the same number of unique words, as the unnumbered Basmala verses are just repetitions of the numbered Basmala (chapter 1, verse 1). However, this is just a coincidence and this did not have to be so. Because, for example, one of unnumbered verses could be different and there is no reason why it is not so. For example, there is no numbered or unnumbered Basmala verse in the beginning of the Chapter 9 and this shows there is no standard in that respect. Therefore, the same concatenated number to be tested, which is **uU** for both text types of Quran. In summary, in this code, I will show that the unique number of words (14870) and their number of letters (80068) together, which is 1487080068, have an interesting 19 based code as follows:

```
suppressWarnings(require(gmp))
tmp <- paste0(u,U, collapse = '')
tmp

## [1] "1487080068"

cat("The mod 19 of the unique numbers combination is ",
    as.numeric(as.bigz(tmp) %% 19))

## The mod 19 of the unique numbers combination is    0

cat("The precise result of the division is found as follows:")

## The precise result of the division is found as follows:

cat(as.character(div.bigz(tmp, 19)))

## 78267372

cat("The mod 114 of it is also 0: ",
    as.numeric(as.bigz(tmp) %% 114))

## The mod 114 of it is also 0:    0
```

There is only one combination of the unique numbers according to the general rules as described in Chapter 3.2 and I showed that both of the descriptive unique numbers can together be coded by a 19 based codeç

As I discussed in detail in Chapters 3.1.7, I argue that it is practically impossible to count the number of **unique words** manually by the people of that time that is 1387 years ago. Therefore, I conclude that this and any other code that includes unique descriptive numbers are beyond the ability of the people of that time to do.

For the reference, to the best of my knowledge, code 6.4 is first time presented to the literature in this book, and it has been hypothesized, tested and discovered by myself. In case if I find out code 6.4 had been available in another article, then, in such a case, I surely add a citation and update the online version of this book.

6.5 Totals

All the codes with **the sum coding pattern** is gathered under this main section. Considering the rules in Chapter 3.2.1 on the total of all the descriptive numbers at the three text levels, we get 6 different numbers to be tested overall. In the following, I will present the two codes out of those 6 potential coding numbers that come out of the set rules.

For the reference, to the best of my knowledge, the codes of this sections, code 6.5.1, and code 6.5.2 are first time presented to the literature in this book. In case if I find out that they had been available in another article, then, in such a case, I surely add a citation and update the online version of this book.

6.5.1 Fact: Totals of the main descriptive numbers

In this chapter we will see two different codes that show the the sums of the numbers of the chapters, verses, words and letters has a relation with 19 as well.

Let's remember the table with which we will compute, in chapter resolution, the sums of the numbers of the chapters, verses, words and letters.

```
x<- dfVCWL
knitr::kable(head(x), booktabs = TRUE,
  caption = 'Table head of the numbers at chapters in Quran considerin
6348 verses.')
```

Table 6.3: Table head of the numbers at chapters in Quran considerin 6348 verses.

Chapter_index	Verse_sum	cWords	cLetters
1	7	29	143
2	287	6144	26268
3	201	3505	15004
4	177	3767	16351
5	121	2841	12225
6	166	3060	12745

Basically, sum of all the numbers in the above table is tested. In this code, the total number at **chapter** level text resolution, based on the all 6348 verses, observed to be multiple of 19 as shown in the following:

```
x<- dfVCWL
tmp <- sum(x)# sum all numbers at CHAPTER resolution
# The sum should be 423985
cat("The sum of all numbers
    at CHAPTER resolution is", tmp, ".")

## The sum of all numbers
##      at CHAPTER resolution is 423985 .

cat("The modulo of it by 19 is ")

## The modulo of it by 19 is

as.bigz(tmp) %% 19

## Big Integer ('bigz') :
## [1] 0
```

We will see another interesting coding over the same chapter level numbers. I wanted to try another meaningful, but mathematically unrelated, hypothesis on the same table that includes all the numbers at the chapter resolution. Then, I hypothesized that if I count the multiple of 19 numbers in each column and get a new number by concatenating those 4 numbers, each represent the total count of multiple of 19 entries in its column, I end up with a meaningful but mathematically unrelated number than the totals of all the table

itself. As you see in the proof below, this unrelated coding number of the table is also multiple of 19.

```
# mod 19 of all the numbers at the chapter resolution
y <- dfVCWL %% 19
knitr::kable(head(y), booktabs = TRUE,
caption = 'Table head of the mod 19 of all the numbers at the chapter
resolution.')
```

Table 6.4: Table head of the mod 19 of all the numbers at the chapter resolution.

Chapter_index	Verse_sum	cWords	cLetters
1	7	10	10
2	2	7	10
3	11	9	13
4	6	5	11
5	7	10	8
6	14	1	15

```
tmp <- paste0(
length(which(y$Chapter_index == 0)),
length(which(y$Verse_sum == 0)),
length(which(y$cWords == 0)),
length(which(y$cLetters == 0))
)

cat("Concatenation of each column's mod 19 counts is ", tmp)

## Concatenation of each column's mod 19 counts is 6783

cat("The modulo of it by 19 is ", (as.numeric(tmp) %% 19) )

## The modulo of it by 19 is 0
```

This stands as a further supporting **fact** for the previous simple all sum code, where those same numbers used. As we observed, the table that keeps all the numbers at the chapter resolution has an additional and independent 19 based relation in it.

Interesting enough, just the opposite of this test is also successful in the second text type of Quran, which is only the numbered 6236 verses. In that text type, the counts of each of the

columns, which are **not** multiple of 19, yields a number that is multiple 19. Here is the proof.

```
# mod 19 of all the numbers at the chapter resolution
y <- dfVCw1 %% 19
knitr::kable(head(y), booktabs = TRUE,
caption = 'Table head of the mod 19 of all the numbers at the chapter
resolution of the numbered verses.')
```

Table 6.5: Table head of the mod 19 of all the numbers at the chapter resolution of the numbered verses.

Chapter_index	Verse_sum	cwords	cletters
1	7	10	10
2	1	3	10
3	10	5	13
4	5	1	11
5	6	6	8
6	13	16	15

```
tmp <- paste0(
  length(which(y$Chapter_index != 0)) ,
  length(which(y$Verse_sum != 0)),
  length(which(y$cWords != 0)),
  length(which(y$cLetters != 0))
)

cat("Concatenation of each column's NOT mod 19 counts is ", tmp)

## Concatenation of each column's NOT mod 19 counts is 10811000

cat("The modulo of it by 19 is ", (as.numeric(tmp) %% 19))

## The modulo of it by 19 is 0
```

Since I do not set general rules for the *facts*, I only present these just as the supporting facts to the code of this section. They are not counted in the probability calculations of the system.

6.5.2 Fact: Totals in verse resolution

This code of this **fact** answers a very simple question:

Is the total of all the 4 main descriptive numbers in the **verse** resolution level of the text also has relation to number 19 or not?

Let's remember the table with which we will compute, in verse resolution, the sums of the numbers of the chapters, verses, words and letters.

```
x<- nQuran
x$text <- NULL #removes this column
x$VerseI <- NULL #removes this column
knitr::kable(head(x), booktabs = TRUE,
  caption = 'Table head of the numbered verses of Quran.')
```

Table 6.6: Table head of the numbered verses of Quran.

chapter	verse	vwords	vletters
1	1	4	19
1	2	4	18
1	3	2	12
1	4	3	12
1	5	4	19
1	6	3	19

Basically, sum of all the numbers in the above table is tested. In this fact, the total number at verse resolution, based on the numbered verses, observed to have 19 based relation as shown in the following where the digit sum of the big representation number is multiple of 19. Since it is digit sum, I considered this coding as a fact rather than code following the universal rules I set in the beginning.

```
tmp <- sum(x) # sum of all numbers at verse resolution
#951202
cat("The sum of all numbers
  at verse resolution is", tmp, ".")

## The sum of all numbers
##   at verse resolution is 951202 .
```

```
cat("The digit sum of it is ", digitsum(tmp))

## The digit sum of it is 19
```

6.5.3 Fact: Totals per chapter numbers

This coding answers this question:

Is the total of all the 4 main descriptive numbers **per chapter**, have also 19 based coding?

In this fact, we first get the representation numbers per chapter and then get the sum that represents the sum of numbers per chapters.

Let's remember the table with which we will compute, in chapter resolution, the sums of the numbers of the chapters, verses, words and letters.

```
x<- dfVCWL # 6348 verse at chapter level data
knitr::kable(head(x), booktabs = TRUE,
  caption = 'Table head of the numbers at chapters in Quran.')
```

Table 6.7: Table head of the numbers at chapters in Quran.

Chapter_index	Verse_sum	cWords	cLetters
1	7	29	143
2	287	6144	26268
3	201	3505	15004
4	177	3767	16351
5	121	2841	12225
6	166	3060	12745

Basically, the digit sum of the sum of all the numbers in the above table is tested. In this fact, the total numbers at **chapter** resolution, based on the all 6348 verses, observed to have 19 based relation as shown in the following:

```
tmp <- paste0(dfVCWL$Chapter_index,dfVCWL$Verse_sum,
  dfVCWL$cWords, dfVCWL$cLetters)
head(tmp)

## [1] "1729143" "2287614426268" "3201350515004" "4177376716351"
## [5] "5121284112225" "6166306012745"
```

```

tail(tmp)

## [1] "109731118" "11042399" "111627100" "11251966" "11362792"
## [1] "11472499"

tmp <- sum(as.numeric(tmp))
as.character(tmp)

## [1] "59738069267437"

digitsum(tmp)

## [1] 76

digitsum(tmp) %% 19

## [1] 0

```

6.5.4 Fact: Totals per verse numbers

This fact answers this question: Is the **total** of all the 4 main descriptive numbers **per verse**, have 19 based relation?

This fact is similar to the Fact 6.5.3 but shows there is this pattern exist also in the verse resolution. Again, we first get the representation numbers per verse and then get the sum that represents the sum of numbers per verse.

Let's remember the table with which we will compute, in verse resolution level, the sums of the numbers of the chapters, verses, words and letters.

```

x<- nQuran # 6236 numbered verses
x$text <- NULL #removes this column
x$VerseI <- NULL #removes this column
knitr::kable(head(x), booktabs = TRUE,
  caption = 'Table head of the numbers at chapters in Quran.')

```

Table 6.8: Table head of the numbers at chapters in Quran.

chapter	verse	vwords	vletters
1	1	4	19
1	2	4	18
1	3	2	12
1	4	3	12
1	5	4	19
1	6	3	19

In this fact, the total numbers at **verse** resolution, based on the the representation number of each verses, observed to have 19 based relation as shown in the following:

```
tmp <- paste0(x$chapter, x$verse,
              x$vwords, x$vletters)
head(tmp)
## [1] "11419" "12418" "13212" "14312" "15419" "16319"
tail(tmp)
## [1] "1141414" "114228" "114328" "1144417" "1145520" "1146313"
tmp <- sum(as.numeric(tmp))
cat("The total number: ",tmp)
## The total number: 272053930879
as.integer(as.bigz(tmp) %% 19)
## [1] 0
```

In this code, we first concatenate the chapter index, verse index, word and letters contents and get the representation number ofr each verse. We then sum them all and get the final code.

When we consider this fact along with the code 6.5.1, then we can see that this fact further assures the conclusion of code 6.5.1 and suggests that there is 19 based design in the full text of Quran when we consider the sum of the descriptive numbers of the full text of it.

6.6 Facts on Chapters with multiple of 19 content

In this code, I tested whether there is any 19 based design in indexes of chapters of which its content, the words or letters, is multiple of 19.

You can test the numbers from these dynamic tables easily:

```
require(data.table, quietly = T)
require(DT, quietly = T)
datatable(dfVCWL,
  caption = 'Total numbers of each category in all 6348 verses
per chapter',
  extensions = c('Buttons'),
  options = list(pageLength = 5, autoWidth = TRUE,
    dom = 'Blfrtip', buttons = c('excel', 'csv')
  ), rownames= FALSE)

#
datatable(dfVCwl,
  caption = 'Total numbers of each category in the 6236
numbered verses per chapter',
  extensions = c('Buttons'),
  options = list(pageLength = 5, autoWidth = TRUE,
    dom = 'Blfrtip', buttons = c('excel', 'csv')
  ), rownames= FALSE)

#Get the indexes of chapter with multiple of 19
tmp <- dfVCWL$cWords #in 6348 verses
i1 <- which( (as.numeric(tmp) %% 19) == 0 )
#10 21 41 76 87 95 96 112
tmp <- dfVCwl$cwords #in 6236 verses
i2 <- which( (as.numeric(tmp) %% 19) == 0 )
#17 27 30 43 54 58 80 110
tmp <- dfVCWL$cLetters
i3 <- which( (as.numeric(tmp) %% 19) == 0 )
#9 90 107
```

The way we get the coding number to be tested as follows: Firstly, from chapters of all the 6348 verse, I obtain the chapters whose number of words are multiple of 19. These 8 chapters have words with multiple of 19 in total:

“10, 21, 41, 76, 87, 95, 96, 112”

And, these 8 chapters have words with multiple of 19 in total from the 6236 numbered verses text type of Quran:

“17, 27, 30, 43, 54, 58, 80, 110”

And, these 3 chapters have letters with multiple of 19 in total from the both text types of Quran. Since the Basmala verse has 19 letters, it does not make differences between numbered or all verses types of the text:

“9, 90, 107”

There are **two different** 19 based codes in these indexes.

First 19 based code: The total number of unique indexes is **exactly** 19. Here is the proof:

```
i <- unique(c(i1,i2,i3))
i <- sort(i)
cat(i)

## 9 10 17 21 27 30 41 43 54 58 76 80 87 90 95 96 107 110 112

cat("The total number of unique indexes is ", length(i) )

## The total number of unique indexes is 19
```

Second 19 based code: When we concatenate those 19 indexes in their natural order, namely, from first chapter to the end in ascending order, We get a long number and it is also multiple of 19. Here is the proof that it is multiple of 19:

```
tmp <- paste0(i,collapse = "")
cat("The representative number to be tested:")

## The representative number to be tested:

tmp

## [1] "9101721273041435458768087909596107110112"

as.bigz(tmp) %% 19 #mod 19 must be zero

## Big Integer ('bigz') :
## [1] 0

cat("The length of the number is ", nchar(tmp) )

## The length of the number is 40
```

For the reference, to the best of my knowledge, code 6.6 is first time presented to the literature in this book, and it has been hypothesized, tested and discovered by myself. In case if I find out code 6.6 had been available in another article, then, in such a case, I surely add a citation and update the online version of this book.

6.7 Facts with chapter and words numbers

We already observed evidences among chapters, verses and words in Chapter 4.1.2. In this chapter, Chapter 6.7, I will present codings as **facts** that shows the 19 based relation between chapters and words only. It may or may not be random but I assume it as random and thus am not considering it as evidence yet. We basically rewrite Quran at the verse level numbers of chapters and words only in Fact 6.7.1.1. However, since the rules of this book is only allowing letters based numbers to be used with rewriting coding pattern, I do not consider it as an evidence but present just as a fact here. As we always do per rule for all the evidences, we want to see the same coding pattern exist in the other level of the text as well, which is chapter level in this case. As I present in Fact 6.7.1.2, we observe that we can rewrite Quran with the same pattern using the chapter level data of chapters and words too.

Following the rewriting coding patterns, we observe that the default coding pattern also exist at the chapter level data of chapters and words, which I present in Fact 6.7.2. I also present further facts as subsections in this main chapter but I think those are the three important coding patterns I designated as facts rather than evidences, though I think they might potentially be reevaluated in the future though they are weaker than the other evidences. Anyways, I preferred to be on the cautious side and designated them as facts but if I can further analyze them in the future and see more clear rules suggesting evidences then I may update the book accordingly.

6.7.1 Rewriting Quran with chapter and words

In the Ultimate Evidence, Evidence 4.2.5.1 and Evidence ?? and also Evidence 4.2.5.2, we had rewritten the text of Quran utilizing the natural numbers of the text of Quran considering chapter, verse, words and letters. Anyways, I hypothesized that there might be other similar evidences without the number of letters. I therefore tested only words focused potential codings and found the code to re-write Quran utilizing only the numbers of chapters and words. I consider it is as interesting because the same coding pattern exist in both levels of the text, which are chapter and verse levels. I provide those codings as subsections to be able to refer them precisely in the book. I will first present the **fact** at the verse level and then in the following subsection, we will witness the same pattern exist in the chapter level too. Lastly, both of the facts are based on the second type of the text of Quran with the 6236 numbered verses.

6.7.1.1 Fact: Rewriting Quran based on words and chapters at verse level numbers

In this fact, Fact 6.7.1.1, the text of Quran will be rewritten with respect to chapter indexes and number of words per verse.

Basically, for each of the 6236 verses, we first **sum** the chapter index and the number of words of each verse, which gives us the representation number of each of the 6236 verses. Since this is rewriting evidence, as usual, we place the representation numbers in place of each verse in the text of Quran. Since Arabic is written from right to left, the representation number of the first verse will be at the most right position. As the main approach of this book, we then concatenate these 6236 representation numbers and get the single meaningful representation number of the text of Quran. Remember this approach, because we will observe that as the same approach will be present at the chapter level too in the next chapter after this one. Thus, they together contain this specific pattern.

Let me first remind the numbers by presenting the head and tail of the table of the numbered verses.

```
tmp <- nQuran
tmp$VerseI <- NULL
tmp$Vletters <- NULL
tmp$text <- NULL
knitr::kable(head(tmp), booktabs = TRUE,
  caption = 'Table head of numbered verses of Quran.')
```

Table 6.9: Table head of numbered verses of Quran.

chapter	verse	vwords
1	1	4
1	2	4
1	3	2
1	4	3
1	5	4
1	6	3

```
knitr::kable(tail(tmp), booktabs = TRUE,
  caption = 'Table tail of numbered verses of Quran.')
```

Table 6.9: Table tail of numbered verses of Quran.

chapter	verse	vwords
114	1	4
114	2	2
114	3	2
114	4	4
114	5	5
114	6	3

And, here is the proof.

```
x<-nQuran
tmp <- x$chapter + x$vwords
tmpr <- rev(tmp)
head(tmpr)

## [1] 117 119 118 116 116 118

tail(tmpr)

## [1] 4 5 4 3 5 5

tmpr <- paste0(tmpr, collapse = "")
as.bigz(tmpr) %% 19

## Big Integer ('bigz') :
## [1] 0

cat("number of digits on this big number is", nchar(tmpr))

## number of digits on this big number is 12579
```

As we see the remainder is 0.

You can access this big number from the following link:

https://github.com/quran2019/Quran19/blob/master/6.3.1_Bignumber

One can just copy the big number and paste it into a web based big number calculator and test it herself.

Also, here is the “12579” digits length big number:

“117119118116116118118118117117117116114116116114115117116117117115

6.7.1.2 Fact: Rewriting Quran based on words and chapters at chapter level numbers

In this fact, Code 6.7.1.2, the text of Quran will be rewritten with respect to chapter indexes and number of words per chapter. Note that we already observed the same rewriting coding patterns exist in the verse level data in Fact 6.7.1.1. In this section, we observe that the same coding pattern exist in the chapter level data too.

Basically, for each of the 114 chapter considering the text type of 6236 numbered verse of Quran, we first **sum** the chapter index and the number of words of each chapter, which gives us the representation number of each of the 114 chapters. Since this is rewriting code, as usual, we place the representation numbers in place of each chapter in the text of Quran. Since Arabic is written from right to left, the representation number of the first chapter will be at the most right position. As the main approach of this book, we then concatenate these 114 representation numbers and get the single representation number of the text of Quran. As you will remember, this approach was also used and had worked at verse level in Fact 6.7.1.1. Therefore, it might show a particular pattern and be potentially interesting.

Let me first remind the numbers by presenting the head and tail of the table of the numbers at the chapter level.

```
tmp <- dfVCw1
tmp$clletters <- NULL
knitr::kable(head(tmp), booktabs = TRUE,
  caption = 'Table head of the chapters regarding numbered verses of
  Quran.')
```

Table 6.10: Table head of the chapters regarding numbered verses of Quran.

Chapter_index	Verse_sum	cwords
1	7	29
2	286	6140
3	200	3501
4	176	3763
5	120	2837
6	165	3056

```
knitr::kable(tail(tmp), booktabs = TRUE,
  caption = 'Table tail of the chapters regarding numbered verses of
  Quran.')
```

Table 6.10: Table tail of the chapters regarding numbered verses of Quran.

Chapter_index	Verse_sum	cwords
109	6	27
110	3	19
111	5	23
112	4	15
113	5	23
114	6	20

And, here is the proof.

```

x<-dfVCwl
tmp <- x$Chapter_index + x$words
tmpr <- rev(tmp)
head(tmpr)

## [1] 134 136 127 134 129 136

tail(tmpr)

## [1] 3062 2842 3767 3504 6142 30

tmpr <- paste0(tmpr, collapse = "")
as.bigz(tmpr) %% 19

## Big Integer ('bigz') :
## [1] 0

cat("number of digits on this big number is", nchar(tmpr))

## number of digits on this big number is 367

```

As we see the remainder is 0 and thus the number is multiple of 19.

Here is the “367” digits length number of this evidence:

```

“134136127134129136118132123128137117130137140135192127168129121133163

284237673504614230”

```

6.7.1.2.1 Fact: Rewriting Quran with words and chapters numbers at chapter level with digit sum

In the previous fact, we observed rewriting of Quran when chapter and word numbers at the chapter level data is summed over the 6236 numbered verses. The same coding pattern exist in all the 6348 verses as well with a single difference. Instead of using sum operation, if we use digit sum operation we observe the similar rewriting with 19 based coding as follows:

```

x<- dfVCWL
tmp <- paste0(x$Chapter_index , x$cWords)
tmp <- sapply(tmp, digitsum)

```

```

tmpr <- rev(tmp)
head(tmpr)

## 11424 11327 11219 11127 11023 10931
##      12      14      14      12      7      14

tail(tmpr)

## 63060 52841 43767 33505 26144      129
##      15      20      27      16      17      12

tmpr <- paste0(tmpr, collapse = '')
as.bigz(tmpr) %% 19

## Big Integer ('bigz') :
## [1] 0

cat("Number of digits on this big number is", nchar(tmpr))

## Number of digits on this big number is 224

```

Here is the “224” digits length number of this evidence:

```

“121414127141419101515138692234232825172023232325312825181622231819283
1282627191620141227222627252223181220243333252422211719222827262924161
9242910233033232531172118143021201816151718201831302228192024291717212
122152027161712”

```

Further fact:

In the end of the related two codes, Code 4.1.2.3 and Code 4.1.2.5, we had observed a fact, Fact 4.1.2.6.2, between the digits length of these two codes that share the same pattern. I tested whether a similar fact exist between the current two related codes, Code 6.7.1.1 and Code 6.7.1.2. I observed a similar 19 based coding fact between the two as well.

As I mentioned before, these two codes, Code 6.7.1.2 and Code 6.7.1.1, share the same pattern and thus might be related. The relation between both of the numbers of the two codes is as follows. The tested number of Code 6.7.1.2 is 367 digits in length. The tested number of Code 6.7.1.1 is 12579 digits in length.

The **fact** is that, when we concatenate both of the digit lengths of these numbers, we get 36712579 and it is also multiple of 19 as if they complement each other.

6.7.2 Fact among Chapters and Words

Following the observation of Evidence 4.1.2.3, I decided to revisit the relation of the words separately with chapters and verses as well. I observed that there is also similar code pattern to Evidence 4.1.2.3 between chapter indexes and number of words in each chapter. All the technical descriptions is same as in Evidence 4.1.2.3, except in this code, we remove the verse sums and only look at the code between the chapter indexes and the number of words in each chapter. We basically used the default coding pattern, where we concatenate the natural numbers in the natural order.

Let me give the natural numbers of Quran at the chapter level to remind you the numbers we will use in this evidence.

```
x<- dfVCWL
knitr::kable(head(x), booktabs = TRUE,
  caption = 'Table head of the numbers at chapters in Quran.')
```

Table 6.11: Table head of the numbers at chapters in Quran.

Chapter_index	Verse_sum	cWords	cLetters
1	7	29	143
2	287	6144	26268
3	201	3505	15004
4	177	3767	16351
5	121	2841	12225
6	166	3060	12745

Again, for each of the 114 chapters, I first concatenated the chapter index and number of words in that chapter and obtained the representation number of each chapter. I then concatenate them from first chapter till 114. This concatenation approach is similar to what we observed in Evidence 5.5.1 and Evidence 4.1.2.3. I will print out this 571 digits length big number in the end of this chapter for your tests. This number includes all the verses, including the unnumbered Basmala verses of Quran. See below for the proof of this code.

```
# With 6348 verses chapter level data dfVCWL.
tmp2 <- paste0(dfVCWL$Chapter_index,
  dfVCWL$cWords)

head(tmp2)
```

```
## [1] "129" "26144" "33505" "43767" "52841" "63060"

tail(tmp2)

## [1] "10931" "11023" "11127" "11219" "11327" "11424"

tmp <- paste0(tmp2, collapse = "")

as.bigz(tmp) %% 19 #Test if remaining is 0

## Big Integer ('bigz') :
## [1] 0

cat("number of digits on this big number is", nchar(tmp))

## number of digits on this big number is 571
```

This fact shows that chapters and words of Quran has a 19 based relation too.

Finally, here is the 571 digits length big number:

```
"129261443350543767528416306073345812469250510184311195012179913857148

191132711424"
```

6.7.3 Fact: Pairing pattern with Chapters and Words

We already observed many codings exist at the chapter level data between chapters and words as in Fact 6.7.1.1, Fact 6.7.1.2, Fact 6.7.2 and Fact 6.7.1.2.1. Especially in Fact 6.7.1.2.1, we observed that we can also rewrite the text of Quran when digit sum operation is used per chapter level representation number. In this subsection, Fact 6.7.3, I will present a **fact**, which shows that the pairing coding pattern along with the digit sum operation exist at the chapter level data. It shows further 19 based relation between all the 6348 verses and the numbered 6236 verses of Quran as presented below:

```
tmp1 <- paste0(dfVCWL$Chapter_index, dfVCWL$cWords)
head(tmp1)

## [1] "129" "26144" "33505" "43767" "52841" "63060"
```

```

tmp2 <- paste0(dfVCwl$Chapter_index,dfVCwl$cwords)
head(tmp2)

## [1] "129"      "26140"    "33501"    "43763"    "52837"    "63056"

tmp <- paste0(tmp1,tmp2)
head(tmp)

## [1] "129129"      "2614426140" "3350533501" "4376743763"
"5284152837"
## [6] "6306063056"

tail(tmp)

## [1] "1093110927" "1102311019" "1112711123" "1121911215"
"1132711323"
## [6] "1142411420"

tmp <- paste0(tmp, collapse = '')
head(tmp)

6.7.3.1 Fact: Key Coding between Chapters and Words at the total level

There is also this coding exist between chapters and words at the total level. It may or may not be coincidence but I show it here as a fact.

There are 114 chapters and 77797 words considering 6236 verse or 114 chapters and 78245 words considering all the 6348 verses. We observe the pairing coding on these numbers as 1147779711478245 is multiple of 19.

This code stands as a potential key coding pattern of Code 6.7.3. Because, we observe this pairing coding pattern at the total numbers level and observe the same coding pattern on the chapter level data. However, as I do not consider any code with only chapter and words information as evidence, based on the defined rules of this book, I do not consider it as evidence. But, these codes stand as strong coding facts for future research.

6.8 Fact on the order of each words with letters

For the code of this fact, I will use the numbers of the below tables that keep all the descriptor numbers for each and every verse in order:

```
knitr::kable(head(unQuran), booktabs = TRUE,  
  caption = 'Table head of all verses of Quran.')
```

Table 6.12: Table head of all verses of Quran.

Versel	chapter	verse	vwords	vletters	text
1	1	1	4	19	بسم الله الرحمن الرحيم
2	1	2	4	18	الحمد لله رب العالمين
3	1	3	2	12	الرحمن الرحيم
4	1	4	3	12	مالك يوم الدين
5	1	5	4	19	إياك نعبد وإياك نستعين
6	1	6	3	19	اهدنا الصراط المستقيم

```
knitr::kable(head(nQuran), booktabs = TRUE,
  caption = 'Table head of numbered verses of Quran.')
```

Table 6.12: Table head of numbered verses of Quran.

Versel	chapter	verse	vwords	vletters	text
1	1	1	4	19	بسم الله الرحمن الرحيم
2	1	2	4	18	الحمد لله رب العالمين
3	1	3	2	12	الرحمن الرحيم
4	1	4	3	12	مالك يوم الدين
5	1	5	4	19	إياك نعبد وإياك نستعين
6	1	6	3	19	اهدنا الصراط المستقيم

I will now perform the test with only words and letters together. Additionally, since we respect the order while concatenating, the verse and chapter orders information are also

implicitly considered in this test. Here, we do not use the verse indexes per chapter directly and thus we can use both types of the text of Quran. In this code, we basically concatenate number of words and letters in the natural order. However, since the coding pattern is not within the rules described in this book, I do not consider this code as an evidence. Because, with the current rules, I do never test words and letters alone for potential evidence tests and also since there is letters information, I only test such cases in reverse order as I consider them as rewriting codes. However, this code is worth keeping in the records and should be known to exist as is. This test works on the text type that incorporates unnumbered and numbered 6348 verses as follows:

```
x<- data.table(unQuran)
tmp <- paste0(x$vwords, x$vletters)
head(tmp)

## [1] "419" "418" "212" "312" "419" "319"

tmp <- paste0(tmp, collapse = '')
as.integer(as.bigz(tmp) %% 19)

## [1] 0
```

Finally, here is the 22999 digits length big number:

6.9 Fact: Code among verse, words and letters

Regarding the general rules, we do not look at this particular combination of the text numbers. Therefore, I present this successful test as a fact for a record of information. We will not include this and any other facts in the probability calculations.

We will perform similar approach to Code 5.5.1 but with special verses, words and letters by concatenating them in the natural order with the verse level data of the text type of 6236 numbered verses as follows.

```

x<- nQuran #6236 verses
tmp <- paste0(x$verse, x$vwords, x$vletters)
head(tmp)

## [1] "1419" "2418" "3212" "4312" "5419" "6319"

tmp <- paste0(tmp, collapse = '')
as.character(as.bigz(tmp) %% 19)

## [1] "0"

cat("number of digits on this big number is", nchar(tmp))

## number of digits on this big number is 35134

```

There is also additional **fact** that complement the previous fact. The above fact exist in the 6236 numbered verses. The similar pattern also exist in all the 6348 verses. This time, we also compute the digit sum of each representative numbers of each verses before concatenating them as follows.

```

x<- unQuran #6348 verses
tmp <- paste0(x$verse, x$vwords, x$vletters)
head(tmp)

## [1] "1419" "2418" "3212" "4312" "5419" "6319"

tmp <- sapply(tmp, digitsum) # digit sum of each verse
tmp <- paste0(tmp, collapse = "")
digitsum(tmp) %% 19

## [1] 0

cat("number of digits on this big number is", nchar(tmp))

## number of digits on this big number is 12517

```

As we observed, in both of the text category of Quran, we observe 19 based codes as facts among verse indexes, number of words and letters.

6.10 Facts: on individual categories

In this section, I will present some interesting individual examples as facts but not as evidences of the general system.

6.10.1 Fact: The Chapters

c

114

The number of chapters in Quran is 114 and it is multiple of 19. Among all the others, Fact 6.10.1 looks like the most obvious one and easiest to count even manually. However, it is still an interesting fact of the text of Quran regarding 19 based coding system. Because it stands as an important clue that leads to the 19 system of the text.

Regarding the reference, the number of chapters and the divisibility of it by 19 were already known by all Muslims and there is no need to give a specific reference for it. God knows best, but in my humble opinion, when considered with the verse, “74:30. Over it is Nineteen”, this so apparent multiple of 19 number 114 might be left so obvious as a clue (along with the 19 letters Basmala verse), so that Muslims get curious about the other numbers of the text of Quran and discover the 19 based coding system of the text of Quran in the end.

6.10.2 Fact: The Verses

v, V

6236 – 6348

The number of numbered verses in Quran was counted from the text computationally and shown to be equal to 6236(v) and the number of unnumbered and numbered verses together in Quran was shown to be equal to 6348(V) in Chapter 3.1.6.1. A reproducible test is provided in Chapter 3.1.3 for anyone who wish to reproduce these natural text numbers. When we combine them by concatenating in both directions to test, the sum of the digits of the two verse numbers v (6236) and V (6348) is equal to 38 and it is multiple of 19. It is easy to calculate but let's use the *digitsum* function again and save some time as follows:

```
tmp <- paste0(v, V, collapse = '')
tmp

## [1] "62366348"

tmp1 <- digitsum(tmp)
cat("The sum of the digits is:", tmp1)

## The sum of the digits is: 38
```

Fact 6.10.2 incorporates both of the verse numbers and show their potential relation to each other regarding 19.

6.11 Fact: Others

In this section, I present some other interesting codes that are not within the general rules but presented as facts.

If I do not observe a systematic pattern and can not set rules, I do not take individual interesting examples as evidence. But, I will still report some interesting numbers as a separate **facts** rather than evidence. In order to claim a number to be evidence, I always consider the set rules and accordingly count the number of potential combinations to be tested so that we can calculate whether the code is statistically significant or not. Another reason I record some interesting tested numbers as a **fact** is that, they might still be part of another coding system that I might not have realized yet but people might investigate further around them and might find a new pattern later and include them as evidence too. Thus, in this current fact, I will present an 19 divisible tested number as an interesting **fact**.

6.11.1 Fact: Totals

This fact is about combining sums of the totals of the main descriptive numbers per chapter.

Let's remember the tables with which we will compute the sums of chapters, verses, words and letters.

```
require(data.table, quietly = T)
require(DT, quietly = T)
knitr::kable(head(nQuran), booktabs = TRUE,
  caption = 'Table head of the numbered verses of Quran.')
```

Table 6.13: Table head of the numbered verses of Quran.

Versel	chapter	verse	vwords	vletters	text
1	1	1	4	19	بسم الله الرحمن الرحيم
2	1	2	4	18	الحمد لله رب العالمين
3	1	3	2	12	الرحمن الرحيم
4	1	4	3	12	مالك يوم الدين
5	1	5	4	19	إياك نعبد وإياك نستعين
6	1	6	3	19	اهدنا الصراط المستقيم

```
knitr::kable(head(unQuran), booktabs = TRUE,
  caption = 'Table head of the all verses of Quran.')
```

Table 6.13: Table head of the all verses of Quran.

Versel	chapter	verse	vwords	vletters	text
1	1	1	4	19	بسم الله الرحمن الرحيم
2	1	2	4	18	الحمد لله رب العالمين
3	1	3	2	12	الرحمن الرحيم
4	1	4	3	12	مالك يوم الدين
5	1	5	4	19	إياك نعبد وإياك نستعين
6	1	6	3	19	اهدنا الصراط المستقيم

From these tables we can compute sum of each columns of chapters and verses and combine them by concatenation and test them as below:

```

# Get the number in the text type 1, all 6348 verses
tmp <- dfVCWL
# Compute the sums of the numbers of each of the 4 categories
tmp <- apply(tmp,2,sum)

# Compute the sum of the 4 descriptor numbers
tmps<- sum(tmp)

#Compute the concatenation of the 4 descriptor numbers
tmp2 <- paste0(tmp, collapse = "")

#Compute the concatenation of the 4 descriptor numbers and the sum
together
tmp2 <- paste0(tmp2,tmps) # 6555634878245332837423985

# Get the number in the text type 2, the 6236 numbered verses
tmp <- dfVCw1
tmp <- apply(tmp,2,sum)
tmps<- sum(tmp)
tmp <- paste0(tmp, collapse = "")
tmp #"6555623677797330709"

## [1] "6555623677797330709"

tmp <- paste0(tmp,tmps)
tmp #"6555623677797330709421297"

## [1] "6555623677797330709421297"

# combine the obtained numbers of both text types by concatenating
x<- paste0(tmp,tmp2)
# should be: "65556236777973307094212976555634878245332837423985"
x

## [1] "65556236777973307094212976555634878245332837423985"

#Tests
as.bigz(x) %% 19 # Test if 0

## Big Integer ('bigz') :
## [1] 0

digitsum(x) %% 19 # Test if 0

```

```
## [1] 0
```

#represent 2/3 successes considering both ways

The first column (Chapter_index) in the table is for the indexes of chapters (1 to 114) and the sum of these indexes, *as another fact is 6555, which itself is multiple of 19* and also one of the three numbers of interest for this fact. The second column contains the verse sum of each chapter and the sum of it, as we know from before, is 6236.

Further Fact: Code between chapters and Verses:

This fact is about the code between the chapter indexes and their corresponding total verses. The sum of chapter indexes (from 1 to 114) is 6555 and the sum of verses in these chapters are 6236. When concatenated, it provides 62366555 as the number to be tested. The digit sum of this number is 38, which is 2×19 .

6.11.2 Fact: Code on letters digit sum at chapter level

This code shows that the digit sum of the digits of the numbers of letters per chapter in all the 6848 verses text type is multiple of 19.

```
tmp <- dfVCWL$cLetters
tmp <- paste0(tmp, collapse = '')
digitsum(tmp) %% 19

## [1] 0

cat("number of digits on this big number is", nchar(tmp))

## number of digits on this big number is 410
```

6.11.3 Fact: Relation between words and letters along with chapter indexes

This code shows that the digit sum of the digits of the number of words and letters in each verse along with chapter indexes in all the text of Quran is multiple of 19.

```
#Chapters, words and letters
x<- unQuran
tmp <- paste0(x$chapter,x$words,x$letters)
head(tmp) # head of the big number

## [1] "1419" "1418" "1212" "1312" "1419" "1319"

tail(tmp) # tail of the big number

## [1] "114414" "11428" "11428" "114417" "114520" "114313"
```

```

tmp <- paste0(tmp, collapse = "")
as.character(digitsum(tmp) %% 19)

## [1] "0"

cat("number of digits on this big number is", nchar(tmp))

## number of digits on this big number is 34429

```

6.11.4 Fact: Words paired with digit sum at verse level

The same pairing and concatenating of digit sums coding pattern of the code 4.2.4, exist also with words when we look at the chapter level data. Basically we pair the digit sum of the number of words in each chapter between 6348 and 6236 verses, then the resulting big number is also multiple of 19 as shown below:

```

tmp1 <- dfVCWL$cWords
tmp2 <- dfVCwl$cwords
tmp <- paste0( sapply(tmp1, digitsum), sapply(tmp2, digitsum))
head(tmp)

## [1] "1111" "1511" "139" "2319" "1520" "914"

tail(tmp)

## [1] "49" "510" "95" "106" "95" "62"

tmp <- paste0(tmp, collapse = '')

as.bigz(tmp) %% 19 #0

## Big Integer ('bigz') :
## [1] 0

cat("number of digits on this big number is", nchar(tmp))

## number of digits on this big number is 383

```

Here is the 383 digits length big number:

```

"111115111392319152091415111391212162115202622201615111318211714192117

6.12 Further facts on Allah and Al-Rahman word positions

In the following subsections, I will presents some interesting coding examples as facts with respect to Allah and Al-Rahman word positions.

I already presented evidences on Allah and Al-Rahman word positions in Evidence 4.2.12.1 and Evidence 4.2.12.2. This chapter provides some additional interesting codes as *facts*.

6.12.1 Fact on Allah and Al-Rahman word positions when paired

In this fact, I will show that the chapter and the special verse indexes of the verses which includes Allah words and the verses which includes Al-Rahman words are together also have 19 based coding. Basically, we will **pair those indexes** between Allah and Al-Rahman words positions. The pattern of this fact is similar to what I presented in Evidence 4.2.12.1 and Evidence 4.2.12.2. In this sub-chapter, we will observe that the same coding pattern exist between the indexes of Allah and also Al-Rahman words.

```
# yunQ is for Allah word from all 6348 verses
# yunQ2 is for Al-Rahman word from all 6348 verses
tmpdf1 <- yunQ
tmpdf2 <- yunQ2
x<- tmpdf1
tv <-c()
for(j in 1:nrow(x)) {
  if(x$verse[j] != 0){#for all the numbered verses
    tmp <- paste0(x$Chapter[j], x$verse[j])
  }else{#For unnumbered Basmala verses
    tmp <- paste0(x$Chapter[j] )}
  tv <- c(tv,tmp) }
length(tv)

## [1] 1678

tmpa <- tv
#
x<- tmpdf2
tv <-c()
for(j in 1:nrow(x)) {
  if(x$verse[j] != 0){#for all the numbered verses
```

```

    tmp <- paste0(x$Chapter[j], x$verse[j])
  }else{#For unnumbered Basmala verses
    tmp <- paste0(x$Chapter[j] )}
  tv <- c(tv,tmp)}
length(tv)

## [1] 157

#Pair both vectors
tmp <- paste0(tmpa,tv)
#concatenate all the numbers
tmp <- paste0(tmp, collapse = "")

as.bigz(tmp) %% 19 #test for 19

## Big Integer ('bigz') :
## [1] 0

nchar(tmp)

## [1] 10313

```

You can access this 10313 digits length big number from the following link:

https://github.com/quran2019/Quran19/blob/master/Fact_7.3.3.txt

One can just copy the big number and paste it into a web based big number calculator and test it herself.

Finally, here is the 10313 digits length big number:

```

6.12.2 Fact on Allah word positions and frequencies with concatenation

In this fact, I will show that the general verse indexes, the chapter indexes, the verse indexes and Allah word counts have also 19 based coding in the numbered verses of Quran with respect to their concatenations as follows.

In this fact, we concatenate the general verse index, the chapter index and the number of Allah words in that verse. For example, the first Allah word in the numbered verse of Basmala verse in the first chapter (Al-Fatiha), which has also the first general verse index. Thus, we get this representative number for it after concatenating in the natural order: 111. Similarly, the following verse with Allah word is at the general verse index 14 and in the second chapter with one Allah word. Thus, we get this 1421 as the representative number for it by concatenating in the natural order. This is done for all the verses with Allah words in it. Then we concatenate all of these representative numbers with each other in the normal order of the table. Then we get 9742 digits length big number and it is multiple of 19. Here is the proof of this test:

```
y <- ynQ #ynQ is from 6236 verses
head(y)
```

```
##      Gen_verseI Chapter verse countW
##      <num>      <num> <num>  <num>
## 1:           1         1     1      1
## 2:          14         2     7      1
## 3:          16         2     9      1
## 4:          17         2    10      1
```

```
## 5:      22      2    15      1
## 6:      24      2    17      1

tmp<- paste0(y$Gen_versel, y$Chapter,
             y$countW)
# head side of numbers of each verse
head(tmp)

## [1] "111"  "1421" "1621" "1721" "2221" "2421"

tmp <- paste0(tmp, collapse = "")
as.bigz(tmp) %% 19 #mod 19 must be zero

## Big Integer ('bigz') :
## [1] 0
```

You can access this 9742 digits length big number from the following link:

<https://github.com/quran2019/Quran19/blob/master/Fact 7.7.4.txt>

One can just copy the big number and paste it into a web based big number calculator and test it herself.

Finally, here is the 9742 digits length big number:

```

6.12.3 Fact: General verse indexes, Chapter and Special verse indexes

In this **fact**, I will show that the general verse indexes, the chapter indexes and the special verse indexes in each chapter with Allah words in it have also 19 based coding in all the verses.

This fact concatenates each general verse index, chapter index and special verse index that have Allah words in it considering all the 6348 verses. We then concatenate each of these representation numbers in its natural order. The resulting 12126 digits length big number is multiple of 19.

```
x<- yunQ #all 6348 verses
tv <-c()
for(j in 1:nrow(x)) {
  if(x$verse[j] != 0){#for all the numbered verses
    tmp <- paste0(x$Gen_verseI[j], x$Chapter[j], x$verse[j])
  }else{#For unnumbered Basmala verses
    tmp <- paste0(x$Gen_verseI[j],x$Chapter[j])
  }
  tv <- c(tv,tmp)
}

# head side of numbers of each verse
head(tv)

## [1] "111"      "82"       "1527"     "1729"     "18210"    "23215"

tail(tv)

## [1] "6325111"  "6331112"  "63321121" "63331122" "6336113"
"6342114"

tmp <- paste0(tv, collapse = "")
as.bigz(tmp) %% 19 # mod 19 must be zero

## Big Integer ('bigz') :
## [1] 0

cat("number of digits on this
    big number is", nchar(tmp))
```

```
## number of digits on this
##      big number is 12126
```

You can access this 12126 digits length big number from the following link:

<https://github.com/quran2019/Quran19/blob/master/Fact 7.7.5.txt>

One can just copy the big number and paste it into a web based big number calculator and test it herself.

Finally, here is the 12126 digits length big number:

7 Discussions and Copyrights

I finished all the evidences that I hypothesized and provided their reproducible tests. In this chapter, I want to share my own subjective thoughts on various topics regarding Quran and the 19 based coding system of its text. I will also share some of my personal thoughts about Quran and Islam. I ask you not to believe me straight away. I suggest you to compare what I express about Islam with the message in Quran and in the end make your own conclusion. I am no expert in Quran and those are the subjective thoughts of an ordinary Muslim.

“those who listen to what is said and follow the best of it. These are the ones (rightly) guided by Allah, and these are (truly) the people of reason.”, Quran, (39:18)

So, you do not have to listen to experts only but you are the one who needs to use her mind and decide what is best for you and follow it.

Reviews, feedback and contact

First of all, what I presented as system in this book might still include some errors that I might not aware of. I performed this study all by myself and had no one to technically review this work. If in your ability, please do your best to review my codes and evidences and their rules and the book in general and provide some helpful critical reviews as feedback. For this, you can reach me on Twitter, in English via @galtay19, or in Turkish via @gokmen_19. Recall that I might have many mistakes as this book is too technical and too many codes exist. So, feel free to test the codes yourself. I did my best to define the rules I observed but there might be better definitions of the rules and they are open to improvements in the future. I will first publish this book as only online e-book. After a while, regarding feedback, if needed I might update the online version and then publish a printed hard copy of this book. This book was first published online on 2019-09-07 and lightly revised once on 2019-12-31 and then I made a major revision by November 2020. At last, made the final upgrade by some newer evidences.

Between these times, I did not have serious specific objections on the coding parts of the evidences. I, myself, had some concerns about its complexity and simplified the rules and updated the book first on 2019-12-31. By the 19th September 2020, I discovered even and odd based evidences and reorganized the rules and presented them within the **Main 19 system** in Chapter 4.1.2 along with the previously available chapter Al-Fatiha coding based evidences. At last, on 2023-12-5, I upgraded the book with significant improvements by some new codes like Fibonacci based and other key coding pattern based evidences and also my last discovered evidences on the iron verse. However, this book might still remain as an online book for some more time for review purposes.

The 19 based coding system I presented in this book might be just the tip of an iceberg and I do not know how much of it I could discovered and presented in this book. Since I concluded that I have discovered sufficient and substantial evidences suggesting that there is 19 based coding system in the text of Quran, I wrote this book based on the system that I could observe via my analysis on the text. If there is any substantial error in the book, it would be solely my unintentional mistake. Then, I would definitely take necessary actions to correct the mistakes. All the inferences are based on my own evaluations and some of them might still be incorrect too. If I say or mean any statement like “what we witness is a design of God”, this means it is my subjective conclusion based on my analysis and inference and not necessarily the absolute truth. Allah knows best. I never claim what I present in this book is the absolute truth as only God knows the absolute truth. Therefore, all my claims must be scientifically critiqued and readers should make their own judgment based on what I present. In case if you do not have sufficient statistics and mathematics knowledge, I suggest you consult expert people around you, who you trust on their judgment.

Lastly, there are some clear simple evidences around Basmala, for instance, it has 19 letters and used 114 times in Quran. I did not include the known evidences in this book as I tried to introduce only novel discoveries in this book. So, if you come across any other evidences of someone else in another publication, which does not contradict with the rules of the 19 system of this book, feel free to consider them as other additional evidences of the system I presented. In short, I do not exclude any other available evidences but just do not include them in this book to make sure I present the new 19 System I discovered with the new evidences only.

Future works

This book was like my hobby project and I wrote it in my spare times after work times, mostly during weekends and on my holidays. Since my spare time is limited, I could not test all the possible hypothesizes I had in mind. I encourage people with the ability and interest to investigate more on this and try to find other potential evidences. However, do never jump on a number as evidence as soon as you see it as multiple of 19. Check if it fits into a system of meaningful rules that you can define in. This is why I provided some 19 based codings as isolated **facts** but not as evidences of the system. This book have sufficient examples for this types of approach.

Especially, I would suggest investigators to investigate the text of each chapter separately. Also, there are already many suggested evidences in the literature about the *Hurufu mukkatta* letters (also called as “disjointed letters” or “mysterious letters”). I have some new evidences on them but I could not study all of them thoroughly. The first reason is that there are already many evidence claims on them. Second, they do not appear in all the chapters and in this book I tried to cover evidences that support the intactness of the **full text** of Quran. However, they are definitely worth investigating. My book also is a supportive evidence for the functionality of those “mysterious letters” and shows that they are essential so that all the 19 based system I presented in my book holds. Without them, my system also collapses. However, I estimate that there may also be more specific evidences over them. I refer interested readers to the evidences in my book and the already available evidences available with an easy search over internet. I do not cite them here as I did not test them myself and not fully sure if the other available proposed evidences on the “mysterious letters” are correct.

Another suggestion would be is to work on per chapter. For example the 9th chapter (At-Tawbah) has 11115 letters and it is multiple of 19. Also, the 9th chapter (At-Tawbah) has 129 verses and when we write all the numbers from 1 to 129 and concatenate them, the big number is also divisible by 19. As it seems in the 9th chapter (At-Tawbah), some chapters might have particular protection as it might be necessary! Each chapter worth investigating individually.

In the first version of this book I had written the following paragraph as future work:

“Another further study can be performed regarding the odd and even chapters and also verse sums of each chapter. There are some early simple examples in that direction such as the one in amazing19.com. They might be extended using the similar approaches I presented in this book.”

In around early September 2019, I myself performed this future work that I had suggested in the first version of this book. As a result, I ended up with all the even and odd pattern based evidences that I presented within the **main 19 system** in Chapter 4.1.2 along with the previously available chapter Al-Fatiha coding based evidences.

Another future work might be to try similar codings on the alternative Quran texts that might be considered more authentic. Feel free to use the R programs I provided in this book and try similar 19 coding trials on the Quran texts you might consider more suitable for text analysis.

My personal message to non-Muslim readers

If you read this book and concluded that the text of Quran has a supernatural design, then, in my humble opinion, I suggest you to read its content. Before doing that, I would like to also suggest you to forget about any prejudices you might have about Muslims and consequently about Islam. To really understand the content of Quran, one should assume that this is totally a new book to read and just try to understand its message. Basically, forget about what you know or observed about Muslims, good or bad, and just read Quran without comparing it at all with Muslims. Because, things that you may consider negative about Islam are most likely not sourced by Quran but sourced by the traditional Muslim belief or simply the culture.

Long story short, I suggest you read Quran as if it was only sent to you from your Creator and try to understand the message as is. Islam is just whatever is written in Quran but nothing else. Islam is not what you see by looking at Muslims' life in general. Also, I suggest you never fully believe any historical reports, except Quran, about Prophet Muhammad. Prophet Muhammad is already best and most truthfully reported in Quran by God.

The gap between Quran and the traditional Muslim belief

Unfortunately, in our current time and probably for a long time, traditional Muslims, which are most of all, have a big gap between Quran and themselves. Most of the non-Arabic speaking Muslims do not even read the translation of Quran in their own language to understand but just recite from its Arabic text without understanding what God tells them to do. This insane practice is so pervasive among non-Arabic speaking Muslim countries. This is not because people prefer to do it themselves but they usually have been instructed

and encouraged to do so by the scholars or imams. Traditional Muslim belief dictates the idea that ordinary people cannot understand Quran themselves alone and they *must* listen to scholars who are expert in Quran and the other sources. They do not stop there and even dictates the traditional idea that Quran is not sufficient to understand alone and one **must** consider those claimed hadith reports (written down about, roughly speaking, 200 years later after the death of Prophet Muhammad) to fully understand Quran! They claim that Quran is not detailed enough to understand and live the religion of God and it was explained and practiced in necessary details only by Prophet Muhammad and thus we **must** read claimed hadith reports to fully understand the message in Quran.

This way, they confine Quran within those historical claimed hadith reports of which no one really knows or agree on their exact total number or accuracy. The end result of this strongly dictated traditional idea is that ordinary Muslims feel obliged to listen to and follow scholars, who were also raised and educated by the traditional Muslim belief. Since this traditional teaching has been injected to the minds of ordinary Muslims from childhood till their old ages, they can not really trust the verses of Quran when they read themselves alone because they have been brainwashed that they cannot fully understand it or they can misunderstand it themselves. Thus, they look like they are afraid to understand the verses in Quran and infer a meaning out of it by themselves. They trust the meaning of the verses of Quran only when a scholar or an imam explains the verses for them. However, this idea is against the message in Quran. Among many other related verses, I will quote only these verses to keep it short here:

“Alif. Lam. Ra. This is a Divine Command whose contents have been made firm and set forth in detail from One Who is All-Wise, All-Aware.”, Quran, (11:1)

“that you may worship none but Allah. Verily, I have come to you as a warner and a bearer of good news from Him”, Quran, (11:2)

It appears to me, God simply informs us that Quran is already detailed and it is done as such so that we do not worship anyone other than God. When we think the opposite of this meaning, if Quran was not detailed enough, we would be in need of scholars who explain Quran for us and this feeling or situation of being in need of anyone else other than God to understand God, then can be considered a form of worship to someone else other than God. There are different forms of worship. From the context, I understand that if one has the belief he **has to** listen whatever the scholars or imams say is what God tells him then it means he basically locates them as **imperative intercessors** between him and God to receive the message of God. However, this situation is against the main message in the Quran. Because a Muslim never needs anyone to connect with God. The classic traditional argument to these verses might be that they would say “we do not worship to the scholars nor imams”. Then, Let’s remember the meaning of worship again. Worshiping means “show reverence and adoration for (a deity); honor with religious rites (a simple Google search

verifies this). The feelings that we **must** listen to those **imperative intercessors** and follow them to understand God's message has the potential to bring additional divine respect, a reverence, to those intercessors. Because their position in our life is in between God and ordinary Muslims. The end result of this feeling is that Muslims listen to them and accept whatever they say about religion without comparing them with Quran. Listening to those intercessors and trusting and obeying their words as if whatever they say is what God wants us to do is a form of worship. Because we listen and obey to those intercessors and we do not really know if what they say aligns with Quran or not. Because, in practice, we show more trust to them than we show trust to Quran. This is because traditional Muslims have been raised so from childhood. The end result of this situation is almost all the negative things that we observe mostly in the Muslim countries or even among Muslim communities abroad. Many traditional teachings have been instructed by the traditional scholars or imams as if they are the instructions of God despite the fact that many of them are either not in Quran or against Quran.

In short, traditional Muslims, the great majority, listen to scholars or imams and try to live their religion accordingly. They do not much read Quran to learn their religion themselves and use their own minds to understand and live according to what they understand from Quran. They only follow the instructions in Quran, regarding what their imams tell them about it. This is not by choice of people but by the dominant traditional Muslim belief that have been keep fed into the minds of traditional Muslims. The main direct relation between Quran and ordinary Muslims, without the intercession of imams, is constantly keep reciting the verses of Quran in Arabic without really understanding it. They were taught that they will be rewarded if they keep reciting it even if they do not understand it despite the fact that there is no such verse in Quran. In contrary, anyone who reads Quran realize that God constantly instruct us to use our minds and speak to our minds. Thus, there is a big gap between traditional Muslims and Quran. This is no surprise as All knowing God had warned us about it with this verse, where Prophet Muhammad complains about Muslims in the Day of Judgement.

"The Messenger has cried, "O my Lord! My people have indeed received this Quran with neglect.", Quran, (25:30).

The source of Islam religion

Many of the things about Muslims that do not seem to align with universal values are not sourced by Quran. Then, you might wonder that why do you see some negative practices by some Muslims, especially around women. The answer is that traditional Muslim belief do not accept Quran alone as their source of religion, which is Islam. Along with Quran they also have claimed historical reports, Hadith narratives, of Prophet Muhammad and the **consensus** (Ijma) that is the agreement of some early Islamic scholars on a matter of

Islamic law mostly in the past. Hadiths are claimed reports about any sayings, actions and approvals of Prophet Muhammad. However, even the most trusted hadith sources, like the book of Buhari, can only be dated back to around 200 years after the death of Prophet Muhammad. Since this is not the main topic of this book, I will not go into more details on this point. But, in short, we can never know and never be sure if any of the claimed hadith reports are %100 correct. The claimed Hadith reports are not like Quran and God only promised to protect Quran but no other book. If The claimed hadith reports were source of Islam as well in the sight of God, then All powerful God would certainly made them recorded like Quran and protected them just like the Quran from the beginning. God knows best but in my humble opinion, this point is another rationale proof that the claimed hadith reports cannot be source of Islam in the sight of God. Some of the hadith reports may be correct, some may be partly correct but some are also false. Any people with the power among Muslims in the history had the ability to seed some false hadiths of their wish and transform Muslims' life accordingly. Especially women was the first affected who got most damage from this way.

There are known to be around more than a million reported claimed hadiths. Some scholars, like Buhari and Muslim, are said to filter them with respect to their own personal judgement and, in their hadith books, kept only the claimed hadith reports if they considered them as "correct" **after around 200 years later** from the death of Prophet Muhammad. Even this information alone should trigger minds of rational Muslims with this question: How can a book be the source of religion along with Quran when it is claimed to be written around 200 years after Quran. I said claimed reports because even those original copies of the hadith books do not exist and copies of the oldest hadith books scientifically can be dated back to only around 400 years after Quran was written. I got this information on my personal research on the topic, but feel free to do your own research. Even if the content of those books really correct, this information alone proves that those hadith books cannot be source of Islam religion, religion for all humanity for all times. If such hadith reports were needed, then we would expect from God to order Prophet Muhammad to make his hadiths recorded or memorized along with Quran as well. Because Quran is for all humanity and for all times. If there was really a need for the hadith reports of Prophet Muhammad then they would definitely made recorded by Prophet Muhammad. This is because, he perfectly fulfilled his duty as a messenger. Otherwise, ironically, traditional Muslim belief, that seemingly is pro-prophet, accuses Prophet Muhammad not doing his duty in full, which is not acceptable. We have Quran and, without doubt, we know Prophet Muhammad has fulfilled his duty perfectly. Since the source of religion is only Quran and there is no other book needed, Prophet Muhammad did not make his hadiths recorded like he did with Quran.

In short, I invite all Muslims to follow what Allah has revealed, only Quran, message of God, as the source of Islam but nothing else. But, the traditional Muslim belief instructs you to

follow the previous Muslim scholars or forefathers. See what God revealed in Quran about a similar situation:

“When it is said to them, ‘Follow what Allah has revealed,’ they reply, ‘No! We (only) follow what we found our forefathers practicing.’ (Would they still do so,) even if their forefathers had ‘absolutely’ no understanding or guidance?“, Quran, (2:170).

“Is God not enough for His servant? Yet they threaten you [Prophet] with those they worship other than Him. If God allows someone to stray he has no one to guide him;“, Quran, (39:36).

The first argument by the traditional Muslim scholars to these pure message is that, without the claimed hadiths, a Muslim cannot even perform correctly her daily prayers with the ritual and also similarly other known practices. This is actually quite a funny and pity question. Because the questioner by default presumes that all the things he knows about Islam is correct and since they are not in Quran with the details they claim there are, then they conclude that Quran is not detailed enough and they must refer to the claimed hadith reports. I will keep this answer short for them here. Quran does not have to include your incorrect beliefs. Your distorted understanding of the religion does not have to be in Quran. The prayers, fasting, cleaning, charity and all the other similar Muslim practices are explained in Quran in sufficient detail as God wishes. Those who raise such objection, I suggest you know your coordinates and do never even attempt to teach the religion to God!

“Say: ‘What! Will ye instruct Allah about your religion? But Allah knows all that is in the heavens and on earth: He has full knowledge of all things.’ “, Quran, (49:16).

The sects among traditional Muslims

As you see, the sources of the traditional Muslim belief are too much for ordinary Muslims to follow and learn themselves. This is one of the other reasons why there exist so many sects and branches among Muslims despite the fact that they all accept the same exact Quran and same prophet. Then, what is the source of their differences in their belief? Simply put, their trusted scholars are different and as they follow them regarding where they were born, they have a different branch within the traditional Muslim belief. Basically, all accept the same Quran but each accept different parts of claimed Hadith reports or Ijma rules and in the end they have a different branch and become a different types of Muslim of a different sect. This is why, in different Muslim countries, you see various types of Muslims in their belief. This situation is again despite the verse they read in Quran but do not take a lesson:

“Surely you have nothing to do with those who have made divisions in their religion and become factions. Their matter is with Allah and He will indeed tell them (in time) what they have been doing.”, Quran, (6:159)

Also, in the following verse, it is clear that the Quran (Scripture) was sent down to Muslims and **explaining everything**. There are also many other verses that inform that the Quran is a detailed book.

“The day will come when We raise up in each community a witness against them, and We shall bring you [Prophet] as a witness against these people, for We have sent the Scripture down to you explaining everything, and as guidance and mercy and good news to those who devote themselves to God.”, Quran, (16:89)

A bad example of the tradition despite Quran

Traditional Muslims have been instructed that they cannot learn their religion in necessary details by just reading Quran and thus they need the claimed Hadith reports and even Ijma. Since the sources become too much for an ordinary Muslim to learn, comprehend and infer any rule from them, **they must listen and follow** scholars who know those details. This is why all traditional Muslims feel forced to or listen to scholars who mostly dictate traditional rules of the traditional Muslim belief. In that case, regarding any given situation, scholars mostly able to find a way to match any given situation to their traditional belief. This has been a very favorable situation for the leaders of Muslim countries throughout the history and today. It is not too hard for them to control the scholars and thus the traditional Muslim people who feel obliged to listen to the scholars. In the history of Muslims, there are many pity examples that some scholars who openly disagree or do not bend to the leader of the country was imprisoned or killed. Once they managed to add sources other than Quran as the information source of Islam, then they can make implement other things of their wish although they are not in Quran and even if it is against Quran. The most extreme example of this situation is the death penalty for a Muslim who openly abandons Islam, apostasy (“*murtad*” in Arabic). In fact, this is totally against Quran. There is no such instruction and it is against the overall message one can infer after reading Quran and additionally, God clearly informs us with this verse:

“There is no compulsion in the religion...”, Quran, (2:256)

Nevertheless, there is a claimed hadith report that exists in the most authentic hadith books like Buhari, and in that, regarding a **claimed hadith** report, the Prophet instructed to kill the one who abandons religion by saying this: “Whoever changed his Islamic religion, then kill him.”. I fully reject this claimed hadith report. I believe that this is one of the false fabricated reports as it does not align at all with Quran. Prophet Muhammad only and only follows Quran and cannot say anything at all that contradicts with Quran.

“Had the Messenger made up something in Our Name,” Quran, (69:44)

“We would have certainly seized him by his right hand,” Quran, (69:45)

“then severed his aorta,” Quran, (69:46)

However, traditional Muslim belief do not reject this controversial claimed hadith about apostasy but interpret it in various ways as they like. As you see, in this extreme example, depends on the time and situation any independent and critical Muslim scholar against the traditional Muslim belief or a leader might be declared as apostate and might be killed. This is one of the other reasons why traditional Muslim belief is so strongly persists in Muslim countries throughout the history and now. As long as this claimed hadith is accepted as correct and thus it is from one of the accepted sources of religion, then anyone who denies this claimed hadith report can be easily declared as apostate (murted) and be killed. A **super clever** one might have seeded this claimed hadith report into among thousands of claimed hadith reports and with this particular claimed hadith, in a way, all the other claimed hadith reports are protected against any further criticism. Because, anyone who reject one of the hadiths might well be declared as apostate and be killed. I am not saying this happens always among Muslims but what I am saying is that as long as that hadith report is within the trusted hadith books like Buhari, there is always a way to do such a thing and it can potentially be used. Then, there is really no freedom of expression in Muslim countries among Muslims, especially back in history. I am able to write this book and make these critiques about the traditional Muslim belief without really feeling significant danger to my life because I live in a Western country, United States of America, where freedom of speech is somewhat exist in general and especially and practically available more when it comes to criticize Muslims. However, to be honest, while writing these critiques about the traditional Muslim belief, I still accept the risk of potential danger to my life anyway. Because, this is a real thing and there are unfortunate examples in the past. For example, Rashad Khalifa, who was an early prominent critique of traditional Muslim belief and was strongly supporting the idea that the source of Islam is only Quran, was assassinated in Arizona in 1990. He was also the author of the **made up and false 19 system** claim, where he had manipulated the text of Quran to match it to his own made up numbers. Back to the point, as a Muslim who try to follow Quran only and fully, in my ability, I have to relate and speak up the truth in Quran no matter what.

No violence in Islam

This topic needs more detailed explanations but this book is not about it mainly. Therefore, I will shorty touch to this important topic as the current perception about Muslims in Western world is not too distance from violence because of, first the biased media, and, second, the many bad examples by some traditional Muslims we saw in history and now. I know that the media mostly is exaggerating the negative examples about Muslims who are

around 1.8 billion people on earth. However, they are there and we have to make an explanation for them.

In short, other than self defense, there is no violence at all in Islam regarding Quran but those bad examples are based on some of the claimed hadith reports or the consensus. I explained before that I reject all the claimed hadith reports as the source of Islam. They are just historical claimed reports and we might get some historical and thus blurred information about past. We can also utilize them to learn about Arabic language of the past as well. As long as they are not considered as the source of Islam, then those claimed hadith reports can also be studied, **if wished**, to understand a topic in the religion. If the approach to the claimed hadith reports is just like to listen any other **preferred** scholar's opinion that we might consider to understand a topic in religion, then one might also try utilize from them while trying to understand a topic in the religion. As long as the claimed hadith reports are not considered the source of Islam or are not given any higher level authority than any other information source, they *might* be studied too. However, this is a very sensitive case as one might be biased towards the claimed hadith reports rather than objectively consider them along with all the other information about a topic. Therefore, be warned that if one has any bias towards them, then there is always potential to infer incorrect biased conclusion on an issue. Therefore, as long as Quran is accepted as the only and only source of information that we must follow, studying any other information source like Arabic language or historical books or listening the interpretation of other knowledgeable people should be fine. But in the end, we must make sure what ever we consider obligatory and do in religion is based Quran only and if they are not based on Quran we do not have to do them and we should never accept them as part of Islam belief.

In addition, there is a group of scholars who say, "I will accept hadiths if they do not contradict with Quran." This group does not see the illogicality of their statement. They have adopted a belief that is similar to what positive-biased people could do, as I warned above. Because it is our responsibility to take the most correct meaning that our mind understands when we read in Quran. However, those who say that they will accept hadith narrations if they do not contradict Quran may choose a meaning that is less suitable for the mind, even though there is a more correct meaning in the Quran according to their mind. This actually means putting the hadith reports, narrations, before Quran. Because, if Quran has already made a more reasonable explanation, but that group would have believed in a weaker meaning just because there is a claimed hadith report about it and it does not contradict with Quran and then they might have gone astray. In addition, they may have also included many practices that do not contradict the Quran into Islam as religion. However, unless it is explicitly stated in the Quran, everything that is not forbidden in the Quran is halal, and everything that is evil and impure is haram. Here is a verse from Surah A'raf for this group that is kind of stuck in the middle belief:

(Quran, 7:157) those who follow the Messenger – the unlettered Prophet – whose description they find in their Torah and the Gospel. He **enjoins them to do what is good and forbids them from what is evil; he makes lawful for them what is pure and makes unlawful for them from what is impure**; he relieves them of their burden and the shackles that were on them. So those who believe in him, they honor and support him, and follow the light which is sent down with him – it is they who will be successful.”

Certainly, when evaluated along with other verses, the messenger of Allah fulfills this command by bringing the Quran as it is, but interestingly, the traditionalists, who associate the hadith reports with the Quran, claim that the Messenger can also make things lawful (halal) and unlawful (haram) by giving their own meaning to this verse in their hearts. However, the Messenger has declared in verse 6:145 that he looks **only** to the Quran for what is unlawful, thereby informing us of his **real hadith** in the Quran. This verse is an example of the real Sunnah, and we, who see only the Quran as the sole source of Islam, follow the Messenger’s real Sunnah in a pure way. Unlike the majority, we do not follow *conjectures* (Quran, 6:116), but only the real Sunnah, whose correctness is guaranteed by Allah, which is to follow whatever is in the Quran (Quran, 46:9). However, the Tradition, following the path of their forefathers, cannot believe without associating their hadith report narratives and even their ‘Great Scholars’ with Quran (Quran, 2:170). Below are some of the relevant verses shared.

(Kuran, 6:145) Say, ‘O Prophet,’ **“I do not find in what has been revealed to me anything forbidden** to eat except carrion, running blood, swine—which is impure—or a sinful offering in the name of any other than Allah. But if someone is compelled by necessity—neither driven by desire nor exceeding immediate need—then surely your Lord is All-Forgiving, Most Merciful.”

(Kuran, 46:9) Say, “I am not the first messenger ever sent, nor do I know what will happen to me or you. **I only follow what is revealed to me.** And I am only sent with a clear warning.”

(Kuran, 6:116) If you obeyed **most of those who are on earth**, they would lead you astray from Allah (God)’s path; **they only follow conjecture and are merely lying.**

(Kuran, 2:170) When it is said to them, “Follow what Allah has revealed,” they reply, “No! We (only) follow what we found our forefathers practicing.” (Would they still do so,) even if their forefathers had ‘absolutely’ no understanding or guidance?

Back to the main topic, once you only take Quran as the source of Islam, then you cannot apply violence to anyone innocent. The only way Quran allows violence is as a form of self

defense. Self defense of individual or self defense of a community like a country. And self defense is a universal right of all humanity. The only verses that are claimed to order violence without self defense is mostly interpreted wrongly although the translation is clear.

“Fight in the cause of Allah (only) against those who wage war against you, but do not exceed the limits. Surely Allah does not like transgressors.” (2:190)

“Kill them wherever you come upon them and drive them out of the places from which they have driven you out. For persecution is far worse than killing. And do not fight them at the Sacred Mosque unless they attack you there. If they do so, then fight them—that is the reward of the disbelievers.” (2:191)

As we see it is clear that God orders Muslims to self defense by instructing “Fight in the cause of Allah (only) **against those who wage war against you**”. The practices of Muslim states in the past, which might have not aligned with this verse, is nothing to do with Quran but with their own traditional belief or political decision.

The other verse that is misunderstood by most are these:

“As for **the** polytheists who have honoured every term of their treaty with you and have not supported an enemy against you, honour your treaty with them until the end of its term. Surely Allah loves those who are mindful (of Him).”, Quran, (9:4)

“But once the Sacred Months have passed, kill **the** polytheists (who violated their treaties) wherever you find them, capture them, besiege them, and lie in wait for them on every way. But if they repent, perform prayers, and pay alms-tax, then set them free. Indeed, Allah is All-Forgiving, Most Merciful.”, Quran, (9:5)

As we see from these two verses, God informs us only within a context. First, regarding verse 9:4, if there is a treaty between Muslims and polytheists within a community then Muslims must obey it. In our current time within a country, we all have under the treaty of a citizenship with other people of any faith. Therefore, all Muslims must respect it even if the country is a majority Muslim country. Any visitor to that country is also considered as under the visitor treaty and thus Muslims must live in peace with all people on earth as long as they both honor their treaty. This is the general rule Muslims might infer from this verse for our time in my humble opinion. Moreover, in the verses, God informs us about a particular polytheists community who live along with the first Muslim community. This is because there is the word “the” definite article in front and they are mentioned as “the polytheists”. So, the verse is not informing about all polytheists but a particular group of polytheists who have not honored every term of their treaty with the Muslims then. This clearly defines self defense even if some Muslims or non-Muslims with prejudice tries to

interpret the meaning of the verse differently. In conclusion, there is no way to infer violence against non-Muslims from this verse in general.

Second, in regard to (9:5), God gives Muslims three options for those who violate the treaty with the Muslim community, which are kill, capture and besiege. It is logical to understand that anyone who are killed cannot be captured or besieged. So, it is easy to understand that these are the options left to Muslim law enforcement officials to deal with the ones who violate the treaty. This verse perfectly align with modern rules. Imagine that there is a terrorist person or a group of people in a modern country. Law enforcement official immediately arrive there and choose their best option and implement it. Their options are to kill, capture or besiege them depends on the situation at that very moment. This verse gives Muslims to be able act similarly. Otherwise, Muslims, even the low enforcement officials, would be hesitant to kill anyone because there are many many verses in Quran advising against violence. There is even this clear verse:

“That is why We ordained for the Children of Israel that whoever takes a life—unless as a punishment for murder or mischief in the land—it will be as if they killed all of humanity; and whoever saves a life, it will be as if they saved all of humanity. (Although) Our messengers already came to them with clear proofs, many of them still transgressed afterwards through the land.”, Quran, (5:32).

Although, in the context there is Israel, we Muslims all should take lessons from all verses. Thus let's read the related part again in bold: “... **whoever takes a life—unless as a punishment for murder or mischief in the land—it will be as if they killed all of humanity; and whoever saves a life, it will be as if they saved all of humanity...**”.

Any Muslim, who read this verse among others, would never be able to kill anyone if God did not inform us with the other verses that orders self defense as well. This is a long topic and I leave it here for now.

I will present these verses as proof that Muslims must always behave peacefully according to Quran.

“He has already revealed to you in the Book that when you hear Allah's revelations being denied or ridiculed, then do not sit in that company unless they engage in a different topic, or else you will be like them. Surely Allah will gather the hypocrites and disbelievers all together in Hell.”, Quran, (4:140).

“And when you come across those who ridicule Our revelations, do not sit with them unless they engage in a different topic. Should Satan make you forget, then once you remember, do not (continue to) sit with the wrongdoing people.”, Quran, (6:68).

As we see there are two different but similar verses and in both of them God orders Muslims to behave peacefully and not conduct any violence even in an extreme situation that is when there is an insult on Islam. God also orders Muslims to stay away only until the insulting people stop their wrongdoing and do not forbid Muslims to interact with them again when they are not keep insulting. It is not because the insult is not important but it is not us but because God will punish them hereafter (unless they ask forgiveness from God). How about the below verses for the most extreme case where God does not order any violence with those who insult even to God and the Messenger, which aligns with the previous verses I quoted above, 4:140 and 6:68.

“The hypocrites are afraid that a Sūrah (a chapter of the Holy Qur’ān) may be sent down about them, which tells them what lies in their hearts. Say, “Go on mocking. Allah is surely to bring out what you are afraid of.”, Quran, (9:64).

“And if you ask them, they will say, “We were just chatting and having fun.” Say, “Is it of Allah and His verses and His Messenger that you were making fun?”, Quran, (9:65).

“Make no excuses. You became disbelievers (by mocking at Allah and His Messenger) after you had professed Faith. If We forgive some of you (who repent and believe), We shall punish others (who carry on their hypocrisy), because they were guilty.”, Quran, (9:66).

The verses are very clear that God does not order any worldly penalty for those who even mock about God but warns those with hell fire in the verse 9:68. However, we Muslims are also human beings and we can still express our reactions in this world in a peaceful manner as this was not forbidden as well. Anyone who follows Quran cannot make violence for no reason other than self defense. However, as I said previously, traditional Muslim belief also accepts other sources for their belief and that might cause different implementations in practice by some of them.

When I explain this matter to my friends who are well educated and peaceful but follows traditional Muslim belief as most, they say “there are also some verses in Quran for violence and its not only the claimed hadith reports”. This is the information from friends who are above average of traditional Muslims. Most Muslims do not really know Quran, because, as I explained before there is a gap between traditional Muslim belief and Quran. They do not know Quran well because they listen to scholars or imams to learn about religion. Since those scholars combine Quran with the other two sources, the end result is not only Quran but those other immense number of things written in those old books. Even the scholars of the traditional Muslim belief cannot comprehend the above verses I shared, then how can an average Muslim do? When I had a traditional Muslim belief, I had asked about this question to a well known scholar. I asked him, considering history, how can we say Islam is

a religion of peace? He, as one of the most modest scholar, replied us, “this is a big lie!”. Because he was modest, he had a bit more courage to confess things he considers wrong. Everyone who listen to him were peaceful traditional Muslim but none of us could reply his answer otherwise. Because, we ordinary Muslims are ignorant of Quran because we do not really know Quran as we have been under brain washing with the traditional Muslim belief since our childhood. It is very difficult to even consider the things I have been writing in this chapter about the traditional Muslim belief. In this chapter, I hope, their minds triggered after reading all these information and read Quran again considering my warnings. Do not believe me but believe God via Quran. And please fully trust the words of God, Quran, and trust your own mind more than you trust those traditional imams and scholars.

At my age 40, I became a Muslim of Quran

Unfortunately, I was one of those traditional ordinary Muslims who would follow the traditional Hanafi branch (called mezheb in Turkish) as most Turkish people do in Turkey. Fortunately, after reading and listening some enlightened scholars over the internet last year (It was 2019 when I first wrote this.), I came across with the message that the source of Islam religion can only be Quran according to Quran. I did not jump into this idea right away but it triggered me to investigate on this. It was not too hard as we Muslims have the same Quran. I read Quran again while testing those claims over the verses which was hard to accept as it was against my strong beliefs that I was raised and lived with all the years. However, after reading Quran to learn and understand what God says and instructs us to do, at my age around 40 in 2019 sometime before Ramadan, I corrected my belief and **accepted Quran alone as the source of my Islam religion**. After then, everything around my Islamic life appeared to be more reasonable, rationale, practical and aligned with the daily life. Living Islam turned out to be quite easy and livable without ignoring things that you can neither reject nor fully accept. However, I then realized that how lonely I turned out to be in that situation. People even treated me as if I abandoned Islam when I openly discuss my opinions with people around me. But, no matter what, I am very happy that God guided me to this pure message. Because, first time in my life, I really feel that what God wants from me to do directly. Before that I was looking at the mouths of scholars and the preaches of imams and thus limited and directed with what they say. There was always intermediaries for me to understand what really God orders me to do. Since the topic of this book is not this, I will not going to much detail about this. However, so far, I am very happy with my spiritual life and repented for the wrong beliefs and practices I had in my previous life. When, I read Quran it is like speaking with God and my heart is delighted when I read and know that I do understand what God says to me and contemplate accordingly. I used to know this verse but only now I witness its meaning:

“the ones who believe and their hearts are peaceful with the remembrance of Allah. Listen, the hearts find peace only in the remembrance of Allah.”, Quran, (13:28).

There is one last thing I want to share about this situation. I had heard about 19 system long years before but I never thought I would be able to research on it myself and test some of pre-existing claims on it because I did not know Arabic and also have no much interest on this topic. However, around the time after purifying my belief and accept Quran as the only source of my Islam religion and repent for my past, I became more interested in Quran. I am currently a data scientist and have the ability to wrangle about data but had no previous experience to work with Arabic text data. I just made a Google search to see if there are some tutorials on the text of Quran and found one in R. I gave it a try and made some hypotheses and witnessed some successes. Then I put forward more hypothesis and witnessed more evidences and decided to write this book. The reason I explain it here because, in my subjective opinion, God might have showed me those evidences and allowed me to write such a book only after I purified my belief in Islam. I am not saying about purification of my humanly sins but I mean the traditional Muslim belief I used to accept and follow.

The discovery date of this system

I have first discovered the 19 based system that I present in this book in early 2019. Only God and me can know this fact for sure. So, you do not have to believe me on this. However, since the date of the discovery and publication of this book has an interesting 19 based pattern, I would like to share it here too. As I mentioned before, regarding historical reports, the revelation of the Quran lasted around 22 years and it was completed by the year 632. Since the 19 based system is over the complete full text of Quran, I took 632 as reference.

$$2019 - 632 = 1387$$

$$1387 = 19 \times 73$$

$$1+3+8+7=19$$

As we see there are two 19 based relations exist with the discover and publication date of the 19 System I presented in this book.

Moreover, if we look at regarding its entrance into the history, there is again an interesting 19 based relation. When we enter in 2019, I had not discovered this 19 based system and there was no book of it as well. Basically, no one on earth, including me had any knowledge on this. However, when 2019 ended, the real 19 based coding system of the full text of

Quran was discovered by myself and its miraculous evidences were published in this book. Let's look at the last date of 2019 then.

If we write this date in American way (as the discovery were made in USA):

The last date of 2019 is 12-31-2019 and this date alone also has **three** 19 based relation as follows. The classic concatenation of them gives us a single representation number:

$$12312019 / 19 = 648001 \text{ (Also } 6+4+8+1=19\text{!)} \text{ and}$$

$$1+2+3+1+2+0+1+9 = 19!$$

We observed three 19 based relations in the same date. If anyone argues on the order of the date, here are the alternative way of writing this date considering the rest of the world. It has also 19 based relation:

$$31122019 / 19 = 1638001 \text{ (Again } 1+6+3+8+1=19\text{!)} \text{ and}$$

Again, we observed two more 19 based relations in the same date, which makes 4 in total. This is just an interesting fact that might show historically an interesting relation between the beginning and end of 2019 with respect to the entrance of this new 19 System and its book into the literature.

Some more relevant verses

Here are some verses and their numbers, where both the content and their numbers might be relevant to the 19 based coding system of the text of Quran.

Muslims certainly believe that Quran is intact, unchanged and protected as it was promised so by God.

“We, indeed We, it is We who have sent down the Reminder, and indeed it is We who will preserve it.”, Quran, 15:9

This verse is the verse 1824 out of the total 6348 verses. 1824 is also divisible by 19 as $1824/19 = 96$. Moreover, instead of Quran or The Book, God uses the word Reminder or Recitation, (in Arabic: الذكر), which refers to the memorized Quran that is verbally recited. There are two miraculous sign here. First, Quran has been conveyed until today via memorization. There is no known complete first written copy but there are tens of thousands people around the world who fully memorized Quran as an historical tradition. Second sign is the shape of the word Reminder, without marks, (in Arabic: الذكر) has been used exactly 19 times in overall Quran. You can test this in Chapter 3.1.5.1 with the dynamic table, Table 3.1. Just copy and paste the Arabic word in the search box of the table and see the word count of it in Quran.

“that cannot be approached by falsehood, neither from its front, nor from its behind -a revelation from the All-Wise, the Ever-Praised.”, Quran, (41:42).

God informs us that falsehood cannot approach Quran from its front nor behind. If you remember the evidences I provided, some of them were based on direct indices (left to right) and some from from the back (from right to left as in Arabic). The reason I considered this might be sign for the 19 based coding system is because 4142 is also divisible by 19.

How about this one, which has very relevant numbering along with its meaning:

“That He may know they have already proclaimed the Messages of their Lord. And He has encompassed (all) that is closely (kept) with them, and He has enumerated everything in numbers.”, Quran, (72:28).

There are is an interesting 19 sign on this verse. The digit sum of 7228 is 19. However, this might be only an interesting sign as no such rule is defined in general anywhere and we can never claim of such connection for sure and God knows best as always.

This is the key verse for the 19 based coding system.

“Over it is Nineteen”, Quran, (74:30)

Interesting enough, the first verse of the chapter of this verse is this:

“O you shrouded (in your mantle),” Quran, (74:1)

The parenthesis is not the translation but the meaning assumed by the translator (Dr. Ghali from quran.com). So, basically the first verse of this chapter is “O you shrouded”. Although the traditional interpretation is different, I suggest that this verse might also refer to the hidden (shrouded) 19 based coding system of the text of Quran. God knows best and this, I consider as one of the possible interpretations.

There are three reasons that caused me think as such. First, this is the first verse of the chapter in which we observed the verse “Over it is Nineteen” (74:30) that might connect the 19 based system of the text of Quran to the content of Quran. Also the literal meaning of the verse “O you shrouded” seem to be perfectly aligning with the unknown 19 based system of the text of Quran. Second, when we perform the classical concatenation coding operation to the chapter and verse indices (74:1) we get 741 and it is divisible by 19, which stands as a sign that further supports this interpretation. Third reason is that this verse is *mutesabih* type of verse, which means it’s meaning might not be directly apparent and might need interpretations regarding other relevant verses or else universal true knowledge.

In Quran, God informs us that there are two types of verses in Quran. First one (muhkams), the explicit revelations that are the foundations of the Book. Others, the second type, are allegorical and God knows their meanings best and they might be open to interpretations by considering their connections with the muhkam verses as understood by some scholars.

He is the One who has sent down to you the Book. Some of its verses are clear, they are the foundation of the Book, and others are allegorical Those whose hearts are diseased seek out the allegorical part in order to cause dissension and to interpret it according to their own desires. Only Allah knows its true meaning, as do those who are deeply versed in knowledge. They say, "We believe in it, all of it is from our Lord." Only those who have hearts and minds can truly understand this. (Quran, 3:7, translated from Y.N. Öztürk's Turkish translation)

The traditional English translations translate as "Only Allah knows its true meaning" but this translation made more sense as Quran was sent to us to follow and we should be able to understand it. Otherwise, the traditional translations say we have a book and the allegorical parts of it can never be understood by anyone. God know best but the translation of Y.N. Öztürk made more sense and I translated and used it here.

Especially, universal scientific related verses that we witnessed in this era are helping us to better understand such allegorical verse examples. This is a different topic and I just tried to summarize *as far as I understand*. Feel free to do your own research if interested in this topic. I am by no means an expert scholar but an ordinary Muslim and these are my understandings on this matter.

Also these two verses might be relevant too. It looks like 74:31 and 74:35 might also be explaining the function of a 19 System over the text of Quran.

"And We have not made the keepers of the Fire except angels. And We have not made their number except as a trial for those who disbelieve - that those who were given the Scripture will be convinced and those who have believed will increase in faith and those who were given the Scripture and the believers will not doubt and that those in whose hearts is hypocrisy and the disbelievers will say," What does Allah intend by this as an example?" Thus does Allah leave astray whom He wills and guides whom He wills. And none knows the soldiers of your Lord except Him. And mention of the Fire is not but a reminder to humanity", Quran, (74:31)

"Surely it is indeed one of the greatest things", Quran, (74:35)

God knows best but these might be relevant to 19 based system of the text of Quran. Also, along with the meaning, 74:35 has this sign too: $7+4+3+5=19$.

This is about the one who reject the signs from God.

“But those who disbelieved in Our Ayat (proofs, evidences, verses, lessons, signs, revelations, etc.), they are those on the Left Hand (the dwellers of Hell).”, Quran, (90:19).

The content warns about the one who reject the signs of God. Then, we would not be surprised to witness a sign on this verse. How about this: $9+0+1+9=19$.

Will the 19 based system might help non-believers to believe in Quran?

“And you see that the people enter Allah’s religion (Islam) in crowds,”, Quran, (110:2).

I am not sure if there is direct relation but 1102 is multiple of 19 and there is at least a sign for the relation.

Chapter 90 : This chapter took my attention as it has a unique 19 based property. Basically the number lead me to this chapter first. The number of letters of this chapter is 361. This is the only chapter with twice the multiple of 19, either as the number of letters or the number of words over all Quran in both text types. When I looked at its general verse index in the numbered verses, it is 6042 and it is also multiple 19 as 19×318 . Let’s look at the verse 19 of this chapter:

“But those who disbelieved in Our Ayat (proofs, evidences, verses, lessons, signs, revelations, etc.), they are those on the Left Hand (the dwellers of Hell).”, Quran, (90:19).

Note also the digit sum of this verse 90:19, which is also $9+0+1+9=19$. Also this particular verse has 6 verses and 32 letters, which makes 38 (19×2) in total.

Note that all the verses and numbers in this small chapter are just facts and not evidences and should be considered as my subjective comments.

Other scientific related miracles of Quran and other interesting facts

19 based coding system of Quran, which is considered as miracles by my own conclusion, is not the only miracle one can witness in Quran. It has also many scientifically related miraculous information in it. If you make a quick internet search, you might see many examples. I already shared one of them about *iron* in my book as a separate chapter in Chapter 6.1. I will share some of them that I find interesting. There are many but most notably, expansion of universe, development of embryo, atom number of iron and mentioning of it being sent down, uniqueness of the finger tips and many others for which I

direct to do your own search. There are already many web sites and books on those that are considered as scientific miraculous statements in Quran.

One other interesting known fact is that light travels at a speed of 299792 kilometers per second. The digit sum of 299792 is 38 that is multiple of 19.

Or, if you count the bones in your hand by looking at an X-ray image, you see there are 19 bones.

Copyrights of this book

All rights are reserved by default. However, I declare that I will never get any publishing royalty fee in either online e-book or printed hard copy or any other possible forms of this book. This means, I will not make any money at all based on this book. I also declare that any of my family or offspring or relatives or anyone else also have no right and will never have any right to make any money based on this book in any way possible. I wrote this book solely for the sake of God and have no other expectations from anyone other than God. Anyone can translate this book into their own language and can publish it as long as they translate it fully correctly and the whole book as is and not partially. I do not allow publishing parts of it. Again, anyone who think the translation is not correct can take the publisher into court for a judicial process and made it corrected by the court in their own country. So, I leave this translation checking process to the good people as this is a book intended for the benefit of all humanity. No publisher can own any of the rights of this book even if they translate it themselves. By translating the book, it means they also accepted that they will not claim any copyright or royalty or any other rights from this book in any form. In short, no one on earth in any way can make money out of this book based on copyright or royalty or any other related form that I may not know as I am not a law person. However, any publisher who wants to publish this book can sell the book whatever the fee they want to sell and can profit out of it. To make sure that some publishers are interested in publishing this book as printed hard copies, I grant this flexibility to the publishers. Again they must publish the whole book as is or not at all. They cannot omit nor censorship any part of the book even a single page or single letter of it. Otherwise they have no right to publish it. Also, no government or any other entity in universe can own the rights of this book in anyway and anytime. I reject any such attempt if in the future any entity does so. This book is for all humanity in universe and no entity has any right to own it in anyway. If any entity or government attempts to limit or censorship any parts of this book, even a single page, I do not allow publishing the parts of this book in anyway by them. In short, either publish the whole book as is or none. There is an exception to above granted rights about the copyrights of this book. In English and Turkish **printed hard copy** publications of this book, I do not grant the rights of publishing of this book in English, which is the original, and Turkish translation without my permission for the next 10 years until the end

of 2033. This is to make sure, I can choose a respected publisher in case if they are interested. Again, even for this English printed version and Turkish translation, I declare that me or any of my family or my relatives or anyone else cannot make any money out of the book's royalty or copyright and me or anyone else cannot ask for publishing royalty fee. After the 10 years period, anyone who wishes can publish the book as long as they publish the whole book as is without any change. In case, if I am not alive by the next 10 years period and no agreements are made yet then this 10 year period condition terminates automatically and any publisher can publish regarding the previous conditions. All conditions are subject to change by myself except that the ones already declared related to royalty fees. Here and first in 2019 and now in 2023, I declare that I already release those rights and even I cannot change this in the future for any reason.

I declare that the online version of this book will always be freely available. Anyone who wishes to make the online version of this book available in their website can do so with these conditions: This book cannot be published in any web site that has any content that contradicts with the teachings of the verses of Quran. No inappropriate ads or actions allowed in the web site this books is published. This book can only be published as the whole book as is. I do not allow parts of the book to be made available in any site. Because this breaks the integrity of the whole book. Even a single page or word of it cannot be omitted or censorship. No inappropriate, contradicting with Quran, advertisements can be shown along with this book.

Acknowledgements

Other than the Bookdown server, you can also access this book from the alternative server via this link: <https://quran2019.github.io/ReproducibleMiracle> . I used R programming language (<https://www.r-project.org/>) for the analysis. I also used the following R packages gmp ([Lucas et al. 2019](#)), data.table ([Dowle and Srinivasan 2019](#)), DT ([Xie, Cheng, and Tan 2019](#)) , tokenizers ([Mullen et al. 2018](#)), stringr ([Wickham 2019](#)). I used Bookdown R package ([Xie 2016](#)) to write this book in this nice shape. For the translation of the verses of Quran, I used quran.com. This book was first published on September 07, 2019 at www.bookdown.org. Its lightly revised version was updated and published on December 31, 2019 at www.bookdown.org. I further made a major revision, which caused the change of the chapter indexes of the evidences by November 27, 2020. I then made the last upgrade of this book on December 5, 2023. Some of the big numbers are not included in this book in order not make it too long. However, I provide some of the big numbers of evidences and other materials in the github page of this book at <https://github.com/quran2019/Quran19>. Anyone can easily download those materials.

8 Appendix: About the Text Version 1.1

I first published my book in September 2019 based on the text version 1.0.2 that I downloaded from tanzil.net. The text had been there for about 13 years and is still considered by them error free by them. However, after around 1.5 years later of my the publication of my book, they somehow decided make a tiny change in the text on February 12, 2021, which seems optional and based on their subjective choice from their perspective. In the appendix chapter, I will explain all the entailing issues of their change and my struggle to find the truth and some codes with the updated text. So, I leave it to expert scholars in the very topic to decide what is the absolute truth by sharing this information too. On the other hand, after my long research, my conclusion is the correct text version is the earlier one, version 1.0.2, and therefore kept my associated codes and the overall system based on that text. However, I suggest expert scholar to elaborate the issue and decide what is correct based on the classic Arabic grammar rules. So, if they are 100% sure the new text version 1.1. is the correct one, with respect to the changed writing form of the word “bada-ma” in the three verses, then they chose and use the version 1.1 as the correct. text version. Then, they should also ignore all my presented codes that includes the word information in those three verses. But, if they are not 100% sure, then I suggest using the text version 1.0.2 as the system I discovered suggest an extraordinary 19 based design over that text I used. Also, my own long research from the classical Arabic grammar point of view made me concluded that the text version I used was the correct one and the word *badama* was written as a single word as in the text version 1.0.2 but not as two words as in the text version 1.1. So, I just made an academic study, shared my discoveries and my conclusion. However, God knows best and I never claim that I know the absolute truth. So, I advice assessing my book as an academic work and feel free to critique with further academical studies in order to make sure the absolute truth is established in the long run. After this summary I will continue with more details about the issue.

As I mentioned, after the publication of my book, the text version 1.1 has been updated on February 12, 2021 by Tanzil.net and the details of that subjective update is explained here, <http://tanzil.net/updates/>. Basically, they made a single and simple change by separating the single written word *badama* as written two words as *bada ma* which were in verses 2:181, 8:6 and 13:37. It does not change the meaning at all but as far as I understand from their explanation, it is just a subjective choice of them. This change just affects the number of words in those verses but not the rest.

8.1 The update of the text after the publication of my book!

Since 2019, I did not publish my book as printed copy but just kept online to make sure I can get critics and some feedback and also review myself before final printed publication. This way, if there is any mistake found, I could quickly correct and update my book. In fact, I

made several updates and enhanced the book with some corrections, improvements and with some of my new findings until the beginning of 2021. Since 2019, I was trying to spread my important findings over my Twitter and Youtube accounts assuming that I can get more quality feedback as it is more spread. One thing I realized during the two years is that, Muslims were not much interested in the 19 based design claims in the text of Quran and mostly ignore the presented findings. When I shared my book in Islam Stack Exchange questions as replies or even ask others opinions about my work as an independent question, all were closed by the editors, where I realized the clear negative look at this topic from Muslims with some influence. This negative prejudice was probably caused by the earlier attempt where the author, Rashad Khalifa, shamelessly removed the two verses from Quran to match the text to his own made up system claim. Scientifically, manipulation of the data is a forgery but his followers have some shameless and unscientific way of defending their forgery act anyways and behave like a cult. On the other hand, the system I initially discovered and published in 2019 does not have any manipulation even to the single letter. As a scientist, I know it would be a clear forgery and therefore declared many times that even if there are millions of codes existed if I were to change a single letter, I do not make such a change, as otherwise it would not be a scientific approach. I just look at the data as is and test to see if there is a rule based system over it, which might show that the text is intact and unchanged. Therefore, any system search can only be investigated over the available texts of Quran without making any change to them unless there is a clear classical Arabic grammar error detected in the text.

At the time of my download of the text of Quran from tanzil.net/download, the latest version of the text was Version 1.0.2. It was the text, which was released in February 4, 2008 and has not been updated till February 12, 2021 with the latest version, which is Version 1.1 (v1.1). As I was subscribed to the email group of the Tanzil server, I got this notification email sent to the email group on February 12, 2021:

“A new release of Tanzil quran text (version 1.1) is ready to download from <http://tanzil.net/download/>. You can see changes log here (tanzil.net/updates). Fortunately, no typo has been reported in the Tanzil quran text since its latest release in 2008, and the updates in this new version are rather technical. Therefore, if you are using the older version of the text (i.e., v1.0.2), it is still safe to use that version.”

As informed in the email from Tanzil, for the last 13 years from the last release of the text, no typo has been reported. This means, no one, who uses the text of this very popular server reported any error for about 13 years. This point further assured in the last sentence of the email by saying “*if you are using the older version of the text (i.e., v1.0.2), it is still safe to use that version*”. It is clear that there is no error in the text v1.0.2, which I had used for

my analysis. On the other hand, they decided to make a few changes as, technically, they **preferred** that way as better as I discuss below in more detail.

On February 12, 2021, Tanzil.net released an update after around 13 years from their last release. There was a single change in the text at the word level data. They changed the writing of the single word *ba'da-ma* (بعدا) as two separate words in this new release, v1.1, as *ba'da ma* (بعد ما). It has been previously written as a single word in the text v1.0.2, as (بعدا). This word appears in only three verses, which are verses 2:181, 8:6 and 13:37. The other three minor updates are about replacing the total three letters with their alternatives from within three other words, to increase compatibility with the Uthmani text. However, since the total letter sum does not change in my codes, this update does not change the letters counts of the previous text and thus not important as it does not mainly affect the current evidences of this book except a few codes with Abjad numbers and thus not important. All the details of the update from text Version 1.0.2 to the Version 1.1. can be seen from their site at <http://tanzil.net/updates/>.

As a consequence of this tiny and somewhat arbitrary update on the single word (*ba'da-ma* in the text Version 1.0.2, now written as *ba'da ma* in text Version 1.1), the codes, based on the text Version 1.0.2, which include the word count information from the following three verses 2:181, 8:6, and 13:37 do not hold for the text Version 1.1. Although the meaning or reading of the word *ba'da-ma* does not change at all with this update, it affects the overall word counts from the related verses since I count the words with respect to empty space among them. Upon the update notification from tanzil.net via email, I was able to reply them and ask the notifier person about the reason of this change on the word *ba'da-ma*. He replied as I quote his exact answer below:

“There are 30 other occurrences of”بعدا“ in the Quran text, all of which have been written separately in Tanzil text since the first version. As both writing styles are correct and are used interchangeably in Arabic, we have decided to replace these three cases in the new version to keep the text consistent. So, it is a matter of consistency, not correctness. Both versions are still correct. ”

There is a link he attached to the word “occurrences”, which brings all the 30 occurrences of “min bade ma” from Tanzil server, such as the one in Verse 2:75, as this: “من بعد ما”. However, when considering the dots (harakas) it is read as “min bade ma” as more clearly seen in the form written with the dots as this “مِنْ بَعْدِ مَا”.

As someone who does not know Arabic but just count the words, the two words did not seem to be the exact same words to me. In all the 30 occurrences of “min bade ma”, there is “min” comes before “bade ma” and these 30 occurrences seem to be a standard phrase as “min bade ma” and written always as separate. However, “ba'da-ma” or “bada ma” appears

in slightly different form than those 30 occurrences despite the fact that they are based on the same words.

Although he said *“both writings of the word are correct”*, the 30 separate writings of slightly different version (“min bade ma”) of the word in contrast to the three writings as single word (“ba’da-ma”) did not seem to me a random choice of writing. There should have been a reason in the first place for them to be written that way for the last 13 years, which was the pattern of earlier time from the tradition. I then further asked to the person the reason why “ba’da-ma” was written as a single word for the last 13 years and not changed since then in the previous version (v1.0.2). His answer was that “ba’da-ma” was written as such in the earlier manuscripts and thus the pattern followed in the Tanzil texts.

Although their current reason of the change, “being consistent”, sounds reasonable, I was not satisfied with the explanation of the change. In the end, the change that is made is in the text of the Quran, one must make sure that the change that is *preferred* is coherent with the classic Arabic grammar. Because, in their explanation of the details of the text, they had already stated that they prepared this text with great care by the reviews of experts and also there was no error reported since 2008. In their web site (http://tanzil.net/docs/tanzil_project) and their FAQ page, they answer some very relevant questions. Some of their relevant answers I quote below:

“Tanzil is a Quranic project launched in early 2007 to produce a highly verified Unicode Quran text to be used in Quranic websites and applications. Our mission in the Tanzil project is to produce a standard Unicode Quran text and serve as a reliable source for this standard text on the web.”

“Our mission in the Tanzil project is to produce a standard Unicode Quran text and serve as a reliable source for this standard text on the web.”

They also state that **they have checked the text against a set of grammatical and recitation rules.**

“Rule-Based Verification: In this step, a program was developed to verify the core Quran text against a set of grammatical and recitation rules...”

“We extensively used the help of a group of experts including Quran specialists and Hafizes in order to assure the correctness and preciseness of the obtained Quran text. Our Quran text is now used in major Quranic websites and projects, with several millions active users per month. *Despite this high volume of users, we have received no typo report since the release of the first version of the text in 2008.* The accuracy of the text has been also reconfirmed by several projects that are actively using Tanzil Quran text.”

” ‘How accurate is Tanzil Quran text?’ Tanzil Quran text is carefully derived from Medina Mushaf, which is currently the most authentic copy of the holy Quran (narration of Hafs).”

So, then the question is, if the text is already correct and has been used for the last 13 years and no error reported, then why bother to change the writing of a single word? This update was released around 17 months after the first online publication of my book. It may seem a simple change but it causes the collapse of most of the codes in my book if I use the updated text. Interestingly, the three verses that include the changed word *ba'da-ma* **coincidentally** have the meaning centered around *changing after the truth*.

Quran, 2.181: “Then, whoever changes it after he has heard it, its sin will only be on those who change it. Surely, Allah is All-hearing, All-knowing.”

Quran, 8.6: “they were disputing with you about the truth after it became clear, as if they were being driven to death being seen by them.” (Translations from: quran.com, Mufti Taqi Usmani)

Quran, 13.37: “And so We have revealed it as an authority in Arabic. And if you were to follow their desires after ‘all’ the knowledge that has come to you, there would be none to protect or shield you from Allah.”

8.1.1 My research and the conclusion on the word *ba'da-ma*

My research on this very specific question started from around February 2021 and mainly finalized by the end of October 2021, though it still continued lightly time to time till now as there was new ChatGPT technology introduced in 2022. It took a long time and is worth explaining the details of my tiring research. However, I will first write the conclusion I reached and the rationale of my conclusion to make sure the reader reads the most important part of this section before reading through all those research details. My research conclusion about the word *ba'da-ma* is that according to the classical Arabic grammar, **ba'da-ma is one word**. Therefore, it is counted as one word in the three verses that include it, which are 2:181, 8:6 and 13:37. Therefore, I decided to keep using the initial Quran text version I had been used, which is the text Version 1.0.2. The overall replies I could receive from Arabic language experts during my research were mixed and there were not a common single answer to this specific question. However, all of the replies were their opinions based on their knowledge at that time. None of them really cited a specific classical Arabic grammar book that supported their decision for this specific question. Since the answers were mixed and not as detailed as I expected to see in an academic publication, I was not fully satisfied with my findings. I further researched myself directly instead of asking experts and in the end I think I found the answer in the very old book *Al-Kitab* (The Book). It is, arguably, one of the few most respected pioneer classical Arabic grammarian, famously known as, Sibawayh. He was known to be born in 760 and died in

796. His full name was *Abu Bishr Amr ibn Uthman ibn Qanbar al-Basri* and he was the leading grammarian of Basra and author of the **earliest** book on Arabic grammar and linguistics. This quote from Wikipedia explains well the importance of his book:

“Al-Kitāb or Kitāb Sibawayh (‘Book of Sibawayh’), is the foundational grammar of the Arabic language, and perhaps the first Arabic prose text. Al-Nadim describes the voluminous work, reputedly the collaboration of forty-two grammarians, as “unequaled before his time and unrivaled afterwards”. Sibawayh was the first to produce a comprehensive encyclopedic Arabic grammar, in which he sets down the principles rules of grammar, the grammatical categories with countless examples taken from Arabic sayings, verse and poetry, as transmitted by Al-Khalil ibn Ahmad al-Farahidi, his master and the famous author of the first Arabic dictionary, “Kitab al-ʿAyn”, and of many philological works on lexicography, diacritics, poetic meter (‘arūd), cryptology, etc” (<https://en.wikipedia.org/wiki/Sibawayh>).

Another quote to know about him is this: *“Sibawayh, who, more than any other individual, was the foundational grammarian of Arabic.”* (<https://www.encyclopedia.com/history/news-wires-white-papers-and-books/sibawayh>).

I will provide a last quote from a web site (sifatusafwa.com) that shows how Al-Kitab is marketed while being sold: “THE KITAB OF SIBAWAYH - THE ULTIMATE REFERENCE: Al-Kitab, the mother-book of Arabic grammar, often cited as the first work on Arabic grammar and its rules, when it was previously only oral tradition”.

There are still recent and ongoing academical studies around Al-Kitab, which suggest that it is fair to consider it as an authoritative resource for my research question, though that does not mean it must be always correct. The reasons I accepted the answer in Al-Kitab from Sibawayh are as follows: First of all he has a sufficiently descriptive answer in his book, Al-Kitab, that clearly describes the exact word *ba'da-ma* is one word in the form of composite pattern. He is one of the closest classical Arabic grammarian to the time of Quran's revelation. His book considered as the first written book in classical Arabic grammarian and already has been accepted as reference and still being actively referenced by academics. The last reason I accepted his answer as the correct answer is because the opinions of current expert academics were mixed and they seem to be not fully sure in their answer considering my perception from the wordings in their answers. Considering all the mixed answers, it appeared as the most rationale approach is to accept the answer of Sibawayh who I perceived as one of the top authority among all the known classic Arabic grammarians throughout the history and up until today. Although, I had my conclusion based on the information from the Al-Kitab and some of the answers I received from Arabic language experts in around 2021, I later also used the new technology ChatGPT, which was introduced in late 2022, and asked her the same question and got the answer that *ba'da-ma* is one word based on her knowledge, which further confirmed my conclusion. I will also share her answers below in detail.

After, explaining my conclusion on the word *ba'da-ma* and the reasons of my conclusions, let me summarize the explanation about the word *ba'da-ma* in Al-Kitab of Sibawayh. Since I do not know Arabic, I performed my search in English and found an academic publication that already summarized the information about *ba'da-ma* in Al-Kitab ([Eddakrouri 2016](#)). I present almost the exact quote for it from **the page 19** of the thesis as below. What a coincidence! Anyways let's continue the information from the thesis on page 19:

“Sibawayhi (Qanbar, V. 2, 1966-1977, p.139) explained that when *بعْدَ* /ba'da/ and *قَبْلَ* /qabla/ are followed by *مَا* /mā/, **they become one word in the shape of compound pattern**. In this case, *مَا* /mā/ stops the two adverbial nouns from *إِضَافَة* /'iḍāfa/ (Annexation) and, instead, they are directly followed by a clause beginning with a verb, usually past tense. For example, *ba'da-mā shāhadahu 'aḥadu lmārrati/* (after one of the passers-by saw him) (Ryding, 2005, p.414).”

We read the explanation of Sibawayh in the first sentence. However, as we see in the second sentence of short quote, there is also one more supporting information from a contemporary time reference Arabic grammar book of Ryding ([Ryding 2005](#)), where *ba'da-ma* is also considered as one word. We might consider this as a further supporting information from a current time classical Arabic grammar expert.

There is also one interesting bit of information about this quote that I want to share here. This is the piece of information in a single short paragraph, which I was satisfied and finally felt confident that I found the correct answer after a long tiring research process. It was also the first and the only information I could find an exact answer about the word *ba'da-ma*. The significance of this information for me was such that it was a turning point for me as I had already started to update my book by changing the main text of Quran as the last updated text, version 1.1, but was still researching as I was not satisfied. As I was not sure about the correct form of *ba'da-ma* considering the mixed answers I had received upon my research, I had started to remove all the related important codings from the main body of my book. Since I was still not sure about the correct form of *ba'da-ma*, I was just going to provide the relevant codes of the previous text as appendix to this book and explain the unclear situation and leave the decision to experts who might research on it in the future. In a sense, I was going to change this book in a more academic format with inconclusive parts to promote and facilitate potential future scholarly studies on the issue and the relevant codes. However, around 6 months after starting my research, as I was not satisfied with the mixed answers, I decided to do some more research over the internet with different keywords myself rather than contacting to experts to ask their opinions. I found right away the information that I quoted above in the master thesis ([Eddakrouri 2016](#)) at **page 19**. So, basically the most critical information for the 19 based system of my book appeared to be *in the page 19 of the thesis* that has 174 pages in total. At the time of finding out this phenomenon, this thesis was the first and the only academic level resource I could have

found during all my long research. It was very interesting for me and I found it worth sharing here. I want you to think about the probability of me finding my final answer in one English resource and the page of that information to be exactly 19.

8.1.2 Summary of my research process about the word *ba'da-ma*:

After summarizing the conclusion of my research, I now start explaining the details of my relatively long research process about the word *ba'da-ma*. From the first publication date of my book 2019 to my further discoveries till 2020, I had performed all my analysis over the *Simple Clean* text Version 1.0.2 and discovered truly amazing codes, which together suggest a miraculous 19 based system with systematic rules over the text of Quran that I studied. The codes of the main system include all the chapter, verse and word information together and suggest a clear system where we observe the key coding patterns of coding rules from the first chapter Al-Fatiha. I allocated a dedicated chapter, Chapter 4.1.2, for this very clearly rule based system that consists of miraculous codes. Assuming that there is no error in the text I used, ("Simple Clean" Version 1.0.2), the system presented in Chapter 4.1.2 suggests that the text has miraculous 19 based design over it, which therefore suggest it is intact and unchanged. This intactness suggesting evidence is up to the level of the number of words used in each verse and over all the current chapters and verses structure. Upon this, there are also some other very interesting codings (Chapter 4.2.5.1, Chapter 4.2.14.1, Chapter ??), which includes letters information too upon chapter, verse and words information. Basically, using chapter, verse and words and letters numbers, we can get representation numbers of each verse. We then replace them with each corresponding verse and, in a sense, rewrite the text by its natural numbers. These codes together stands as strong evidences that suggest intactness up to the level of the order of words and number of letters in each verse over all the current chapters and verses structure. Upon these codes, there are also many interesting codings that I presented over various chapters in this book. However, those stands out as very clear codings that suggest a system up to the letters over the full text of Quran ("Simple Clean" text Version 1.0.2) with its current structure. I can never claim that it is absolutely a divine design but I can easily defend against any critique that there is clear rule based 19 coding system over that particular text and my *conclusion based on my observations and measurements* is that it suggests a divine design. However, with the new text update, most of these important codes along with the codes of the main system collapses if the correct form of the single word *ba'da-ma* is written separate as it was changed in the latest version v1.1 of the text.

I would be quite surprised to observe all the clear 19 based system on the text I used (v1.0.2) if the absolute true form of the word *ba'da-ma* was in fact separate as in the updated text version v1.1. There are only a few interesting new unique codes in v1.1 I found and presented in the next subchapters, but I could not see a clear 19 based system as I saw in the text version 1.0.2. I decided to make a research to find an answer that satisfies my

mind and heart whether the true form of the word *ba'da-ma* is single word as *ba'dama* or two words as *ba'da ma* with respect to classical Arabic grammar rules. As I did not know Arabic, it was quite a difficult task for me. Therefore I decided to consult expert academics on the issue and also look at the earliest Quran manuscripts.

Regarding the old Quran manuscripts, it turned out that they cannot help finding the true form of the word as there is the disconnected letter *d* before the word *ma*, which always causes a same size empty space between the preceding word of the *ma* independent from the form of the word whether it is single word or two words. This is a fact observed in the early handwriting manuscripts before the typewriters that allowed printing the text. An academic, Dr.van Putten, who has expertise in early manuscripts informed me about this fact when I asked about the status of the word *ba'da-ma* in early manuscripts to another expert in Twitter (now called X). I present his exact answer in the following image to precisely cite this information:

I did not know this fact and had already looked at many of the old manuscripts that I could find from the corpuscoranicum.de server to see the word *ba'da-ma* in the three verses that include it. They all appeared with a notable space between the words *ba'da* and *ma* but during this research some other single words also took my attention with similar size of empty space after the disconnected Arabic letters like *d*. Since I was not neither expert in Arabic grammar nor in old manuscripts I could not have any conclusion by that

observation. Dr. van Putten's explanations confirmed my observation. So, in conclusion of my research about the old manuscripts, it turned out that the early manuscripts do not help much in finding the true form of the word *ba'da-ma* with respect to classic Arabic grammar. After finding out this fact, the only option appears to be to search an answer from the resources or experts about classic Arabic grammar.

I searched experts from all over the world via internet and tried to reach all the academics with expertise in Arabic language that I could find. A small portion of them kindly returned to my question with an answer about whether the word *ba'da-ma* is one word or two words in the three verses with respect to classic Arabic grammar. Unfortunately, the replies were mixed, which left me with an unsatisfactory feeling as neither my mind nor my heart was fully convinced that I found the truth from the replies I received. It is worth summarizing the replies I received as this process lasted for a significant time from about February 2021 till October 2021.

Experts opinions summary:

In this summary of experts' opinions, I will mention only the names of the experts who gave permission to share their names along with their replies. Also, I will not share the full answers but try to summarize the main points of all the answers. The other point that I should mention is that I have two groups of replies. The first group replied upon my first question format in around March 2021, where I had asked the question as "*whether ba'da-ma is written as a single word or two separate words in those three verses of Quran?*". Because my assumption at that time was that the writing form could clarify whether the word is a single word or two words. However, as I mentioned before, the handwritten early manuscripts cannot help answer this question. Since my wording of the question includes *writing*, this may cause a little bias towards writing style or confusion. My goal was to learn whether *ba'da-ma* is single word or two words regarding classic Arabic grammar. Along with my question, as an example, I also shared a contemporary Arabic poem where the poet used *min bade ma* as separate words in the first verse but *ba'dama* as joint single word in the second verse. Because I had assumed that the poet should have good level of Arabic grammar and he might have a grammatical reason to use both versions of the word as separate and joint in the two consecutive verses.

I first received an answer from an Associate Professor from an Arabic Language Department in Türkiye. She said "It is usually written separately, but sometimes it can be written adjacent as in jahiliyyah (pre-Islamic) poems etc.". She also asked another faculty member, who has some work on the word *ma*, in her faculty and he provided more detailed answer. He suggested to avoid certain judgments about *ma* as there are 12 types of it and also additional usage of them in jahiliyyah poems. His particular opinion for the *ba'da-ma* in the three verses was as it is two separate words. These two experts are non-native speakers of Arabic.

In another answer, a professor of Pre-Islamic Literature from Jordan replied with an answer explaining the general situation and his own opinion. My summary of his answer is as follows: "We (Muslims) follow and forever will be following the writing of the Holy Quran of the seven copies that was written down in the time of Caliphate Othman. The writing of the Noble Quran is exclusive for it as the shape of it is considered as a holy thing and untouchable. However, the contemporary model of writing of Arabic is not as in the Quran.". After explaining the general perspective about the writings of Quran and current Arabic, he shared his own opinion about my specific question as follows: "... some are writing without space and others with separate, and all are respected. But, for me, I always write it and many similar words as one word, and the confusion comes from a great thing in Arabic writing which is the connecting and disconnecting letters, so it confuses a lot of Arabs and beginners. According to (بعداً) and (من بعداً) I disagree with the sending writing and I see that (بعداً) is one word in any text without looking at the word before or after". By saying "the sending", he refers to the poem I had shared in my email, where *ba'da-ma* and *min bade ma* were used in two consecutive verses of the poem by the poet, as one word and two words, respectively. So, basically this answer, from a professor of Pre-Islamic Literature from Jordan, says, no matter what *ba'da-ma* or *min bade-ma* always one word. This was very interesting answer as I did not see before a single usage of *min bade ma* as in a composed form like *min bade-ma*. This part of the answer was only provided by this expert.

Another answer I received was from Dr. Mu'men Badarin, Assistant Professor in Arabic Grammar at Arabic Department from Palestine. His answers was quite short, which I summarize as follows as far as I understand: Dr. Badarin considers "*ba'da-ma* written as a single word in Quran traditionally although, in general, this word should be separated (بعداً) unless, if "Ma" was a disrupter (kaffa; كافة) ". As a support to his opinion, he said" according to the holy Quran, the writing is unique and doesn't align with the standard way of writing (Othmani Drawing)". He also shared 4 different books as a reference without any specific quote or page mentioning but since I did not know Arabic, I could not read them.

I also received a more detailed answer from Dr. Ahmed Ali, Professor of Translation at the Dept. of Arabic and Translation Studies from UAE. He also spent some time to research the issue and kindly replied my multiple emails in detail. His first answer to my first email was as follows:

"When *ba3d* is used as an adverb, the /d/ would have a fathah and then it is written as one word *يَعْدَمَا* . If *ba3d* is preceded by the preposition /min/, it is then used as a noun, and it is then written as two separate words *بعْدَ* then *ما*. Together with /min/, these would be 3 separate words: *من بعْدِ ما*." He also provided a more detailed answer regarding the poem example, which had both usage of the word *ba'da-ma* in two consecutive verses, as follows: "The example you have quoted cannot be accepted in any way as a proof of anything as a general principle. This is modern poetry and linguistically means nothing and cannot be

used to substantiate one view or another. However, the author seems to follow the Qur'anic convention of writing, that is, when *بعْدَما* is adverbial, it is one word; and when *من بعدِ ما* has *ba3d* as a noun preceded by *min*, it is written as separate words. Is this based upon some grammatical rules, I cannot tell on the top of my head. However, this merits investigation. Since this is what you are doing, then you may check what the grammarians say about this: the use of *ba3d* adjectivally or as a noun as well as the semantic implications. It will be worth your while as well to check the various uses and functions of /*ma*/ as this could render some clues as to why /*ba3dma*/ is sometimes written as 1 or 2 words".

Dr. Ali also suggested to consult to highly-qualified reciters. I tried and could find one, at least to my impression, who kindly answered that *ba'da-ma* is two words. I shared his detailed answer, which was referring to different sound layers, with Dr. Ali and asked his opinion on it but he said that it is just *ijtihad* (independent reasoning) which lacks solid evidence. Months later, I had the opportunity to ask two other reciters (*Hafiz*), one said two words and the other (from Egypt) said one word. Dr. Ali was quite responsive to my further follow up questions and helpful as he himself made some research by querying to some other scholars about the issue. Dr. Ali shared an answer he could receive upon his queries. The answer was from a Professor of Qur'an recitation specialized in *Waqf* and *Ibtida* as follows: "He said that *ba3da-ma* is two words and stated:"This issue has nothing to do with reception. This is what we have learnt." He meant that linguistically *ba3da* is a word and *ma* is another word according to the Arabic language. He did not mean that he received like this from his teacher. Unfortunately, when I queried this issue further with him he only repeated what he had said, that is, "This issue has nothing to do with reception." Thus, my conclusion is that he is using *ijtihad*. This is just his own opinion."

Dr. Ali further added this "Now, all this really is not an issue at all when it comes to reciting the Qur'an since no one pauses at *ba3dama* nor does none need to pause at *ba3da*. This explains why the many people asked about this really do not know. They had never thought of this particular example as a problematic issue. However, it becomes an issue when it comes to counting the words."

This gave me the impression that reciters may not be right source to find out the specific issue about the status of *ba'da-ma*. In the same and final email to answer my questions, he shared his final opinion as follows:

"I can tell you now with 100% certainty of mine that /*ba3da ma*/ in those 3 Ayahs are two words. These two words are clearly written as two in all the Qur'an copies I have checked. The Qur'anic script is respected when it comes to recitation and I am not in any way confused in determining that /*ba3da ma*/ in the 3 Ayahs in question are two words written separately. In all the copies I checked this is the case. So, I hope this concludes this issue."

So, he based his conclusion regarding to the Qur'an copies he has checked. Since I could not see a grammatical reference to early classical Arabic book, I was not fully convinced. However, he had spent significant time to research on the issue and I was leaned upon his opinions considering his sincere efforts on the topic, I had then started to update my book as taking the last text (v1.1) as the main text of my book and moving the codes with previous text (v1.0.2) to appendix of my book. I was going to leave the issue open to future research by other scholars. Basically, I was going to transform my book in more of an academic form by pointing out the issue and leave the solution for future research by others. This process was the result of the first part of my research. But, then I had to give a break to the revision of my book as I was fully occupied by family issues and sickness for several months.

The second part of my research was not planned but occurred spontaneously. Right after my sickness healed, as I was not satisfied with the mixed and personal opinion based answers, I decided to research the issue one more time instead of continuing the revision I had already started and progressed to the half of it with the text version v1.1. At my first attempt this time, I found the academic resource, a master thesis of ([Eddakroui 2016](#)), where I read the explanation of Sibawayh from the Al-Kitab as if one of earliest classical Arabic grammarian authorities, Sibawayh, directly answers my very specific question! I was very happy as I first time found an answer from a classic Arabic grammar book, which turned out to be the book of one of the few most respected early classical Arabic grammarians, and in fact the earliest and most popular one. I wanted to ask about this turning point information about *ba'da-ma* to other experts to make sure my conclusion based on this information is not wrong. Then, I contacted to some other experts about the matter by sharing the information in Al-Kitab from Sibawayh and the issue around the three verses in Quran and asked their opinions whether they agree with that or not. I was able to receive a few replies, in short, most agreed with the answer I concluded from the quote of Sibawayh. I will also share those replies below.

I received a very short answer from quite a high profile scholar, who was a professor and chairman, of Arabic and Islamic Studies in Lebanon. He has PhD in Arabic Studies from Yale University. Upon sharing the quote of Sibawayh and the alternative opinion from an internet forum that suggest *ba'da-ma* is allowed to be written in two words, I asked to the professor, which one do you think is correct? His exact short answer is as follows where he agrees with Sibawayh as considering *ba'da-ma* as one word:

“The first explanation is the correct one. They form one word and this is common in Arabic with many particles.”

I received another answer to the exact form of the question from Dr. Samer Ali, who is an Associate Professor of Arabic and Islamic culture at the Department of Near Eastern Studies

from USA, where his answer was also favoring *ba'da-ma* as one word. Here is his exact answer:

"The short answer is that they become one word in terms of writing/orthography. The longer answer is that the Qur'an was written down before those orthography rules were codified – the original Qur'an texts, for example, didn't have dots or vowels – so now it's hard to say definitively what rules apply to Qur'an orthography."

I also received another answer to the exact form of the question from an Assistant Professor of Arabic Language & Culture from Egypt. His answer was short and clear as this:

"I totally agree with what has been said by Sibawayhi."

So, in total I was able to receive three answers about the precious information about the word *ba'da-ma* from Sibawayh, and all the professors agreed with Sibawayh, which says *ba'da-ma* is one word. These opinions confirmed that my resource is credible and the information in it is also correct. After that I researched more about Sibawayh and his book *Al-Kitab* and realized that I found one of the best classical Arabic grammar source available for my specific and subtle question. I was mentally and by heart convinced that I found the right answer and selected the initial text (v.1.0.2) where *ba'da-ma* as one word and started over the revision from the beginning again considering this situation. I shared the information from Sibawayh about *ba'da-ma* with Tanzil server contact person but did not receive a reply.

As he had replied the most before, I further consulted to Dr. Ahmed Ali again about the conclusion I had from quote of Sibawayhi. He fully disagreed with my conclusion and replied that the explanation below. However, his final conclusion was that we have to look at Qurani scripts and I do not agree with that approach as I explained before the disjoint letters, like 'd', had always the same space to its preceding letter no matter the word is joint or separate. Here is the the full answer from Dr. Ali:

" I shared the quoted information from the Sibawayh with Dr. Ahmed Allaithy and asked his further opinion on this new information too. He kindly provided me with a detailed answer. He said he looked at this source (Sibawayhi ibn Qanbar, 1988, v2, pp.138-139) for the information from Sibawayh. In short, he does not agree with the conclusion inferred from Sibayahi's quote which he considers to be a quote out of context. This entails that considering *ba3da-ma* as being one word based on this misquote cannot be correct in the context of Quran. He believes that we need to look at the manuscripts and physically check the matter from the script for an answer to this specific question. I try to summarize and quote the points of his answer as follows:

“This is really not an evidence to rely on regarding ba3da ma being one word or two words... Sibawayhi was definitely not addressing whether ba3da ma in the Qur’anic script is one word or two words; rather he was addressing a general linguistic issue regarding how the word is used by Arabic users in terms of writing. He was not commenting on the Qur’an...

In conclusion: ... It is crystal clear that Sibawayhi never said ba3da and ma are one word. He said al-Murrar al-Faq3asi made them one word to serve his poetic and semantic purposes which he achieved using grammar as explained above. Since your issue under study is whether ba3da and ma are one word or two words, what Sibawayhi says about the noun that follows ba3dama is irrelevant to your discussion.

To end, what I am really saying and stressing here is that if the matter is regarding counting ba3da and ma as one word or two words, you need to consider and physically LOOK at the Qur’anic script. There is no doubt in all the copies I have checked –old and modern- that ba3da and ma in the Ayahs under study, are TWO words separated one from the other like any other two words in the Qur’an. No scholar worthy of his title can say we ignore the Qur’anic script.”

So, I have my conclusion based on my research but a further discussion from expert academic scholars at a top academic level workshop and publication of the their conclusion with detailed reasoning on the issue would be helpful.

Finally, in the late 2022, the ground breaking general artificial intelligence technology ChatGPT was introduced. Since, it can read also the Arabic literature, I decided to ask her about the issue. The short answer is that ChatGPT replied bada-ma as one word. See the details in the following section.

8.1.3 ChatGPT answers on the word bada-ma

My first prompt to each of the AGI (Artificial General Intelligence) ChatGPT models on date 11-19-2023 is the following prompt. The follow up prompts can be seen in their sections. The AGI model Google BARD was surprisingly better and detailed so I placed it first. One thing that was common is that all the models I tried provided the information that badama is one word. Especially, BARD provided references to early and modern scholars all saying badama as one word. I urge any interested expert scholar to check and verify the answer from BARD by looking at the resources it provided. If correct, that answer perfectly settles the issue as many respected scholars seem to be concluded badama as one word.

Just before I was about to finish my upgrade of this book on around December 14, 2023, a new and latest AGI model released by Google instead of BARD, which is claimed to be on par or even better than ChatGPT-4. I decided to ask the same questions that I had asked to

the older version of it, BARD, as presented above in BARD section. Below are my questions and her answers on December 14, 2023. I short, Gemini, brought old and modern scholars opinions about badama as one word as you can see in detail in the end of this chapter.

My first prompt for each ChatGPT model:

Act like you are one of the top expert scholar in classical Arabic grammar and Quranic Arabic while answering all my following questions.

Question: There the word badama (بعدا) in Quran verses 2:181, 8:6 and 13:37. However, some Quran texts write that word as two words like 'bada ma' ((بعد ما) while some other Quran texts write it as one word as 'badama' (بعدا) .

I am counting the words and I want to cont correctly.

Do you know whether it is one word or two words ACCORDING to classical Arabic grammar and Quranic Arabic?

8.1.3.1 BARD (Goggle):

According to classical Arabic grammar and Quranic Arabic, the word “badamā” (بعدا) is considered one word, not two. This is because the conjunction “ma” (ما) is often incorporated into the preceding preposition or adverb, forming a single lexical unit. This phenomenon is known as “idghām” (إدغام) in Arabic grammar, and it is a common feature of both classical and Quranic Arabic.

In the case of “badamā,” the conjunction “ma” is assimilated into the preposition “ba‘da” (بعد), resulting in the formation of the single word “badamā.” This is consistent with the way “ma” is treated in other similar constructions, such as “ḥattā mā” (حتى ما) and “lammā mā” (لما ما).

Therefore, when counting words in the Quran, “badamā” should be counted as a single word, not two. This is in accordance with both classical Arabic grammar and Quranic usage.

MY PROMT 2:

Do you know any early respected scholar, like Sibawayhi or similar, who commented on this exact issue?

BARD

Yes, there are several early respected scholars who commented on the issue of whether “badamā” is one word or two words. One of the most prominent is Sibawayhi (135-206 AH), the renowned grammarian and author of the seminal work “Al-Kitāb” (The Book).

- **Sibawayhi (135-206 AH)**

In his seminal work “Al-Kitāb” (The Book), Sibawayhi addresses the issue of prepositions and conjunctions, specifically mentioning the case of “badamā.” He states that “badamā” is considered a single word due to the assimilation of the conjunction “ma” into the preposition “ba‘da.” He further explains that this assimilation is a common occurrence in Arabic grammar and that it facilitates pronunciation and flow.

Other early scholars who have addressed this issue include:

- **Al-Khalīl ibn Ahmad al-Farāhīdī (100-170 AH):** A renowned philologist and lexicographer who extensively studied the rules of Arabic grammar. In his work “Kitāb al-‘Ayn” (The Book of the Eye), he discusses the assimilation of “ma” into prepositions and adverbs, including the case of “badamā.”
- **Al-Zamakhsharī (467-548 AH):** A prominent grammarian and lexicographer who is known for his concise and insightful explanations of grammatical concepts. In his commentary on the Quran, “Al-Kashshāf” (The Uncoverer), he explicitly states that “badamā” is one word, not two.
- **Ibn Najāh (d. 1373 AH):** A renowned grammarian and linguist who wrote extensively on Arabic grammar and lexicography. In his work “Sharḥ al-Kāfiyah” (Explanation of the Kāfiyah), he provides a detailed analysis of the assimilation of “ma” into prepositions and adverbs, including the case of “badamā.”

These are just a few examples of the many early respected scholars who have commented on the issue of whether “badamā” is one word or two words. Their consensus is that, according to both classical Arabic grammar and Quranic usage, “badamā” should be considered a single word, not two.

MY PROMT 3:

Are there modern scholars who discussed this?

BARD

Yes, there are several modern scholars who have discussed the issue of whether “badamā” is one word or two words. Some notable examples include:

Muhammad Shafi’ Imrani (1904-1982)

In his comprehensive work on Quranic grammar, “Al-Wafi fi’l-‘Ulūm wa’l-Funūn wa’l-Ādāb” (The Sufficient in Sciences, Arts, and Literature), Imrani dedicates a section to the

assimilation of “ma” into prepositions and adverbs. He specifically mentions the case of “badamā” and confirms that it is considered a single word due to this assimilation.

Mustafa Jamaluddin Zarqā’ (1900-1980)

Zarqā’, a renowned scholar of Islamic studies and Quranic interpretation, also addresses the issue of “badamā” in his commentary on the Quran, “Az-Zilāl li’l-Qur’ān al-Majīd” (The Shades of the Glorious Quran). He explains that “badamā” is one word due to the assimilation of “ma” into the preposition “ba‘da,” citing the views of classical Arabic grammarians like Sibawayhi.

Muhammad ‘Abd al-Salam al-Khaṣṣīb (1917-2000)

In his in-depth analysis of Quranic grammar, “Al-Nahw al-Wāḍiḥ min al-Qur’ān al-Majīd” (The Clear Grammar from the Glorious Quran), al-Khaṣṣīb provides a detailed explanation of the assimilation of “ma” into prepositions and adverbs. He specifically mentions the case of “badamā” and confirms that it is considered a single word, citing the consensus among early and modern scholars.

These are just a few examples of the many modern scholars who have discussed the issue of whether “badamā” is one word or two words. Their consensus is that, according to both classical Arabic grammar and Quranic usage, “badamā” should be considered a single word, not two.

8.1.3.2 ChatGPT-3.5:

In classical Arabic grammar and Quranic Arabic, the word “badama” (بعدا) is considered as one word, not two. The Quranic text is known for its precision in grammar and syntax, and this particular word is consistently written as a single word “badama” (بعدا) in the verses you mentioned (2:181, 8:6, and 13:37).

While there may be variations in how the Quran is printed or transcribed in different texts or editions, it’s essential to rely on authoritative and established sources when studying the Quranic Arabic language and grammar. In this case, according to classical Arabic grammar and Quranic Arabic, “badama” (بعدا) is correctly considered a single word.

8.1.3.3 ChatGPT-4:

I am based on the GPT-4 architecture, and my training data includes information up to April 2023.

MY PROMPT on date 11-19-2023:

“Which ChatGPT version are you and what is your latest training date?”

In classical Arabic grammar and Quranic Arabic, the word “بعداً” (badama) is indeed a point of discussion among scholars. To understand this, we need to delve into the nuances of classical Arabic and the orthographic traditions of the Quran.

Classical Arabic Grammar: In classical Arabic, the word “بعداً” combines two parts: “بعد” (ba’d, meaning ‘after’) and “ما” (ma, a relative particle that can mean ‘what’, ‘that which’, etc.). In classical grammar, these two parts can function as a single unit, where “ما” is a conjunction used to introduce a subordinate clause after “بعد”. When they function together as a single unit, they can be written as one word, “بعداً”.

Quranic Arabic and Orthography: The Quranic script, particularly in its early manuscripts, often presents a unique orthography that does not always align with the classical Arabic grammar rules developed later. Early Quranic manuscripts often showed a flexible approach to the separation of words, and the orthography was not standardized in the way it is today. In some Quranic texts, “بعداً” is written as one word, while in others, it is separated into “بعد ما”. This variation reflects the orthographic practices of the time when these manuscripts were written.

Modern Standardization: Modern printed editions of the Quran often adhere to a standardized orthography, which may choose either form. The choice of one word or two does not necessarily affect the meaning significantly but can impact word counts or interpretations of verse structure.

For your purpose of counting words accurately, it’s essential to decide on a standardized form and stick to it. If you are looking at a specific Quranic text or a particular recitation tradition (Qira’at), it would be wise to follow the orthography as presented in that tradition. In academic or scholarly settings, it’s common to specify which orthographic tradition or text edition is being used for such counts.

After I input the answer of BARD to ChatGPT4, this time, it provided a more detailed answer by conforming BARD as follows:

The explanation provided by BARD (Google) aligns with the understanding of classical Arabic grammar and Quranic Arabic. The concept of “idghām” (إدغام) in Arabic grammar, where a conjunction like “ما” (ما) is merged with a preceding preposition or adverb to form a single lexical unit, is a standard grammatical feature.

In the specific case of “badamā” (بعداً), as BARD explains, the conjunction “ما” is assimilated into the preposition “ba’dā” (بعد), creating a single word. This treatment of “ما” is consistent with other similar constructions in Arabic, such as “ḥattā mā” (حتى ما) and “lammā mā” (لما).

Thus, in line with classical Arabic grammar and the traditional interpretation of Quranic Arabic, “badamā” should indeed be counted as a single word when analyzing the text of the Quran. This understanding is crucial for accurate word counts and textual analysis in Quranic studies.

8.1.3.4 GEMINI (Latest BARD of Goggle):

My first starting question is the main question I share at the beginning of this main chapter and I asked the same to all the model while starting the conversation. I start sharing Gemini’s answer to my main question and will continue with my other quesitons as needed:

Gemini’s answer to my main question:

As a scholar of classical Arabic grammar and Quranic Arabic, I can offer some insights regarding the word “badama” in the verses you mentioned.

Grammatically:

- “Badama” is considered a **conjunction** in both classical and Quranic Arabic.
- It functions as a subordinating conjunction, similar to “after” or “when” in English, introducing a temporal clause.
- Some grammarians argue it can be analyzed as two words (“bada” and “ma”), but most agree it functions as a **single unit** with its own morphological and syntactic properties.

Quranically:

- The majority of Hafs readings, a widely accepted recitation tradition, write “badama” as **one word**. This is supported by the presence of a single “shadda” (doubling mark) over the “ma” in the script.
- Some other readings, such as Warsh, write it as “bada ma” with separate words. However, these are considered **variant readings** and do not significantly alter the meaning or grammatical function.

Therefore, from both classical Arabic grammar and Quranic Arabic perspectives, “badama” is generally considered **one word**. This aligns with the dominant Hafs reading and the presence of a single “shadda” in the script.

It’s important to remember that counting words in the Quran can vary depending on the chosen recitation and specific counting methodology. However, for accuracy and consistency, considering “badama” as a single word aligns with prevalent grammatical and Quranic interpretations.

I hope this information provides a helpful perspective on this question. Feel free to ask any further inquiries you may have regarding classical Arabic grammar or Quranic Arabic.

Please note that I am not able to discuss personal opinions or interpretations of the Quran, as my role is to provide information and insights based on established grammatical and linguistic principles.

MY PROMPT 2:

Do you know any early respected scholar, like Sibawayhi or similar, who commented on this exact issue?

Gemini

While Sibawayhi doesn't explicitly address "badama" in his seminal work, "Kitab al-Kitab," several early and respected scholars have commented on similar constructions and offer relevant insights:

1. Al-Khalil (719-786 AD):

- He analyzed conjunctions like "badama" as composite words, arguing they arose from the fusion of two elements ("ba" and "ma"). This supports the idea of "badama" functioning as a single unit.

2. Al-Mufaddal al-Dababi (737-809 AD):

- He discussed similar conjunctions like "fa'inna" and "hattama" as single words with specific grammatical roles. This analogy strengthens the case for considering "badama" a unified word.

3. Al-Farra (d. 822 AD):

- He analyzed "badama" as one word with a single "shadda" on the "ma," aligning with the dominant Hafs reading and further supporting its unity.

4. Ibn Malik (1204-1274 AD):

- In his renowned treatise, "Alfiyyah," he mentions "badama" as a single conjunction, reinforcing the prevailing understanding of its grammatical function.

These scholars, although not directly addressing "badama" itself, provide valuable insights into the nature of similar constructions and support the interpretation of "badama" as a single word in both classical Arabic grammar and Quranic recitation.

It's important to remember that language analysis and interpretations can evolve over time. While the majority view "badama" as one word, other perspectives exist. However, the evidence from early scholars like Al-Khalil, Al-Mufaddal, Al-Farra, and Ibn Malik aligns with the dominant understanding and provides a strong basis for considering "badama" a unified word in your word count.

Ultimately, the choice of counting "badama" as one or two words might depend on your specific methodology and desired level of granularity. However, understanding the supporting arguments from classical Arabic grammar and prominent scholars like those mentioned above can help inform your decision and ensure consistency in your analysis.

I hope this information proves helpful in your further exploration of this topic.

MY PROMT 3:

Are there modern scholars who discussed this?

Gemini

Absolutely! Modern scholarship has continued to explore "badama" and its status as one or two words, providing valuable insights and perspectives. Here are some notable examples:

1. Muhammad al-Harami (1928-2013):

- A renowned Moroccan scholar, linguist, and expert on Quranic recitation. In his work on Hafs readings, he categorized "badama" as a single conjunction, aligning with the dominant interpretation.

2. Muhammad Fuad Abdul-Baqi (1890-1973):

- A prominent Egyptian scholar and author of the renowned Tafsir Al-Azam. He also considered "badama" a single conjunction in his analysis of Quranic grammar and syntax.

3. Mustafa Sadiq al-Ra'i (1914-2004):

- A distinguished Iraqi linguist and expert on Arabic morphology. He analyzed "badama" as a fused conjunction, supporting the idea of a single word with its own morphological and syntactic properties.

4. Ibrahim Muhammad al-Ani (1943-present):

- A renowned Egyptian linguist and author of several books on Arabic grammar and Quranic studies. He discussed "badama" in his work on Quranic recitation, emphasizing its single-word status based on grammatical and historical evidence.

5. Modern Quranic Recitation Studies:

- Contemporary research on Quranic recitation traditions further strengthens the argument for “badama” as one word. Studies of Hafs and other recitation styles consistently demonstrate the use of a single “shadda” on the “ma,” indicating a unified grammatical unit.

These are just a few examples, and many other modern scholars have engaged in discussions and analyses of “badama” and its word status. The general consensus among them aligns with the classical Arabic grammar principles and the dominant Quranic recitation traditions, supporting the interpretation of “badama” as a **single word**.

It’s important to note that, like any linguistic matter, there might be alternative perspectives and interpretations. However, the weight of evidence from both classical and modern scholarship strongly favors considering “badama” as one word when analyzing Quranic texts and engaging in word counts.

I hope this information provides a comprehensive overview of modern scholarship on “badama” and empowers you to make informed decisions in your research and analysis.

Please feel free to ask any further questions you might have on this or other topics related to classical Arabic grammar or Quranic studies. I’m here to assist you in your scholarly pursuits.

MY PROMT 4: Do you know a few words in Quran that can be used as a direct analogy to the status of the word badama?

Gemini

Certainly! Here are a few words in the Quran that serve as useful analogies for the status of “badama” as a single word:

1. حَتَّى (hattama): This conjunction, meaning “until” or “so that,” is also analyzed as a single word despite being composed of two elements (“ha” and “ta”). Its unified nature parallels that of “badama,” where the fusion of two elements creates a single grammatical unit.

2. كُلَّمَا (kullamā): This adverbial conjunction, meaning “whenever” or “every time,” exemplifies another composite word with a single “shadda” and a similar grammatical function as “badama.” Its unified structure further strengthens the argument for considering “badama” a single word.

3. لِئَا (limmā): This conjunction, meaning “because” or “since,” shares a similar composition with “badama” (“li” and “ma”) and carries a single “shadda.” Its status as a unified word further reinforces the analogy for “badama.”

4. **ثُمَّ (thumma)**: This conjunction, meaning “then” or “afterwards,” demonstrates the fusion of two elements (“tha” and “ma”) into a single word, much like “badama.” Its grammatical role and unified structure offer another pertinent analogy.

5. **قَدْ (qad)**: This adverbial particle, meaning “already” or “indeed,” showcases a single “shadda” despite its potential analysis as two elements (“qa” and “da”). Its unified nature, despite the potential for separate components, strengthens the analogy for “badama.”

These are just a few examples, and many other Quranic words exhibit similar characteristics of being composite yet functioning as single grammatical units. By drawing analogies from these words, you can further solidify the understanding of “badama” as a single word in Quranic recitation and analysis.

Remember, linguistic interpretations can vary, but the weight of evidence from classical and modern scholarship, including analogies from other Quranic words, strongly supports the unified status of “badama” as one word.

I hope this information proves helpful and continues to enrich your understanding of Quranic language and grammar.

8.2 Some 19 based codes on the text Version 1.1

The codes that does not include the words information in those three verses are still the same and holds in both text. However, the associated codes are affected. I applied the standard codings with the numbers of this text too to see if there is similar system. I did not observe a similar system where the associated words information is used. However, I observed some interesting but isolated codes specific to this text that I will share them as facts in this chapter for your assessment.

In this Chapter I will present some interesting **codes** that exist in the Simple and Clean text of Quran with Version 1.1 from tanzil.net.

We first need to get the updated numbers regarding the Simple and Clean text of Quran with Version 1.1. You should be able to download the text from this link: <http://tanzil.net/download/>. We follow the same process as before and get the numbers in exact same way as below.

```
require(data.table)
tenzil = read.csv("data/quran-simple-clean.v.1.1.txt", header=F,
                 stringsAsFactor=F, encoding="UTF-8", sep="|")
quran <- tenzil[1:6236,]
colnames(quran) = c("chapter", "verse", "text")
quran <- cbind(as.numeric(rownames(quran))), quran)
```

```

colnames(quran)[1] = "VerseI"
quran$VerseI <- as.numeric(quran$VerseI)
quran$verse <- as.numeric(quran$verse)
quran$chapter <- as.numeric(quran$chapter)
quran <- data.table(quran)
nQuran11 <- quran
nQuran11$text <- gsub("بسم الله الرحمن الرحيم", "", quran$text)
#
versecomb <- c()
for(j in 1:114){
  i <- which(nQuran11$chapter==j)
  versecomb <- c(versecomb, nQuran11$verse[i[length(i)]] )
}

dfVC11 <- data.table(cbind(c(1:114), versecomb))
colnames(dfVC11) <- c("Chapter_index", "Verse_sum")
#
require(tokenizers, quietly = T)
#All words in numbered verses
words11 <- unlist(tokenize_words(nQuran11$text))
w11 <- length(words11) # should be 77800 (in 1.0.1 it was 77797 )
cat("Number of words in numbered verses is ", w11)

## Number of words in numbered verses is 77800

#number of letters in numbered verses
letters11 <- sapply(words11, nchar)
l11 <- sum(letters11) #should be 330709 same as in 1.0.1
cat("Number of letters in numbered verses is ", l11)

## Number of letters in numbered verses is 330709

#All words in numbered and unnumbered verses
Words11 <- unlist(tokenize_words(quran$text))
W11 <- length(Words11) #should be 78248 (in 1.0.1 it was 78245)
cat("Number of words in numbered and unnumbered verses is ", W11)

## Number of words in numbered and unnumbered verses is 78248

Letters11 <- sapply(Words11, nchar)
L11 <- sum(Letters11) #should be 332837 same as in 1.0.1
cat("Number of letters in numbered and unnumbered verses is ", L11)

```

```
## Number of letters in numbered and unnumbered verses is 332837

#
vwords<- c()
vletters <- c()
for(i in 1:nrow(nQuran11)){
  tmpw <- unlist(tokenize_words(nQuran11$text[i]))
  vwords <- c(vwords,length(tmpw))
  vletters <- c(vletters,sum(nchar(tmpw)))
}
nQuran11<- cbind(nQuran11[,1:3],vwords, vletters,nQuran11[,4])
colnames(nQuran11)[6] <- "text"
##
tmpN11 <- nQuran11
tmpN11$CV <- paste(nQuran11$chapter,nQuran11$verse, sep = ":")

datatable(tmpN11,
  caption = 'Table of numbered verses of Quran (text v.1.1)',
  extensions = c('Buttons'),
  options = list(pageLength = 5,
    autoWidth = TRUE,
    dom = 'Blfrtip',
    buttons = c('excel')
  ),
  rownames= FALSE)

## Warning in instance$preRenderHook(instance): It seems your data is
too big for
## client-side DataTables. You may consider server-side processing:
## https://rstudio.github.io/DT/server.html
```

Below, we get the text numbers for all the 6348 verses similarly:

```
unQuran11 <- c()
for(i in 1:114){
  if(!(i %in% c(1,9))) {
    tmp <- data.frame(1,i,0,4,19,as.character(nQuran11$text[1]))
    colnames(tmp) <- colnames(nQuran11)
    unQuran11 <- rbind(unQuran11,tmp,
      nQuran11[nQuran11$chapter==i,])}else{
      unQuran11 <- rbind(unQuran11,
```

```

nQuran11[nQuran11$chapter==i,])
      }
}
unQuran11$VerseI <- c(1:nrow(unQuran11))

tmpUN <- unQuran11
tmpUN$CV <- paste(unQuran11$chapter,unQuran11$verse, sep = ":")

datatable(tmpUN,
  caption = 'Table of all verses of Quran (text v.1.1)',
  extensions = c('Buttons'),
  options = list(pageLength = 5,
    autoWidth = TRUE,
    dom = 'Blfrtip',
    buttons = c('excel')
  ),
  rownames= FALSE)

## Warning in instance$preRenderHook(instance): It seems your data is
too big for
## client-side DataTables. You may consider server-side processing:
## https://rstudio.github.io/DT/server.html

```

Similarly we get chapter level numbers of the text as follows:

```

cwords <- c()
cletters<-c()
for(i in 1:114){
  cwords <- c(cwords,sum(nQuran11[chapter==i]$vwords))
  cletters <- c(cletters,sum(nQuran11[chapter==i]$vletters))
}
dfVCw111 <- cbind(dfVC11[,c(1:2)], cwords, cletters)
# Let's print this table
require(DT)
datatable(dfVCw111,
  caption = 'Total numbers of each category in numbered verses
per chapter (text v.1.1)',
  extensions = c('Buttons'),
  options = list(pageLength = 5, autoWidth = TRUE,
    dom = 'Blfrtip',buttons = c('excel')
  ),rownames= FALSE)

```

```
###
cWords <- cwords + nQuran11$vwords[1]
cLetters<-cletters + nQuran11$vletters[1]
cWords[1] <- cWords[1]-nQuran11$vwords[1]
cLetters[1] <- cLetters[1]-nQuran11$vletters[1]
cWords[9] <- cWords[9]-nQuran11$vwords[1]
cLetters[9] <- cLetters[9]-nQuran11$vletters[1]

#add the one Basmala per chapter verse into the verse counts
dfVCWL11 <-cbind(dfVC11[,c(1:2)],cWords, cLetters )
dfVCWL11$Verse_sum <- dfVCWL11$Verse_sum+1
dfVCWL11$Verse_sum[1] <- dfVCWL11$Verse_sum[1]-1
dfVCWL11$Verse_sum[9] <- dfVCWL11$Verse_sum[9]-1
# Let's print this table
datatable(dfVCWL11,
  caption = 'Total numbers of each category in all verses per
chapter (text v.1.1)',
  extensions = c('Buttons'),
  options = list(pageLength = 5, autoWidth = TRUE,
    dom = 'Blfrtip',buttons = c('excel')
  ),rownames= FALSE)
```

8.2.1 Code: Chapter, verse and words at verse level

In this code, we will simply concatenate the chapter indexes, verse indexes and the number words at each verse considering all the 6236 numbered verses. We will observe that, both, the big number itself and also the digit sum of the big number are multiple of 19. The exact same coding pattern also exist in the text version 1.0.2 but at the chapter level data. But, here we observe the same coding pattern in the verse level numbers of the text 1.1 instead of the code have from chapter level numbers of the text 1.0.2. I provide the proof and the big coding number below.

```
x<- nQuran11
tmp <- paste0(x$chapter,x$verse,x$vwords)
head(tmp)

## [1] "114" "124" "132" "143" "154" "163"

tail(tmp)

## [1] "11414" "11422" "11432" "11444" "11455" "11463"
```

```

tmp <- paste0(tmp, collapse = '')

as.bigz(tmp) %% 19

## Big Integer ('bigz') :
## [1] 0

digitsum(tmp) %% 19

## [1] 0

cat("number of digits on this big number is", nchar(tmp))

## number of digits on this big number is 33249

```

As we have seen, not only the big coding number itself but also the digit sum of it is also multiple of 19. Lastly, below is the “33249” digits length big number of this interesting code.

```

8.2.2 Code: Chapter, Verse, Words, Letters at chapter level rewrite

In this code, we have rewriting coding pattern with the. chapter level numbers. We simply concatenate, from right to left as in Arabic , the chapter indexes, number of verses, words and letters per chapter considering all the 6348 verses. I provide the proof and the big number below.

```

x<- dfVCWL11
tmp <- paste0(x$Chapter_index, x$Verse_sum,
              x$cWords, x$cLetters)
head(tmp)

## [1] "1729143"          "2287614526268" "3201350515004" "4177376716351"
## [5] "5121284112225" "6166306012745"

tail(tmp)

## [1] "109731118" "11042399" "111627100" "11251966" "11362792"
"11472499"

tmpr <- paste0(rev(tmp), collapse = '')
as.bigz(tmpr) %% 19

## Big Integer ('bigz') :
## [1] 0

cat("number of digits on this big number is", nchar(tmpr))

## number of digits on this big number is 1210

```

Lastly, below is the “1210” digits length big number of this interesting code.

"114724991136279211251966111627100110423991097311181084146210782913310

8.2.2.1 Further fact

In the previous code we observed the rewriting coding pattern but the same code also works from the other way around, namely without reversing the number. In this code, we simply concatenate the chapter indexes, number of verses, words and letters per chapter considering all the 6236 numbered verses. However, this coding pattern is against my current rules as I use reverse order as in Arabic in the concatenation if there is letters information as I consider it as a rewriting coding pattern. I provide the proof and the big number below.

```

x<- dfVCw111
tmp <- paste0(x$Chapter_index, x$Verse_sum,
              x$cwords, x$cletters)
head(tmp)

## [1] "1729143"          "2286614126249" "3200350114985" "4176376316332"
## [5] "5120283712206"   "6165305612726"

tail(tmp)

## [1] "10962799" "11031980" "11152381" "11241547" "11352373"
"11462080"
  
```

```

tmp <- paste0(tmp, collapse = '')

as.bigz(tmp) %% 19

## Big Integer ('bigz') :
## [1] 0

cat("number of digits on this big number is", nchar(tmp))

## number of digits on this big number is 1205

```

Lastly, below is the “1205” digits length big number of this interesting code.

```

1135237311462080”

```

8.2.3 Code: Words only at verse level rewrite

In this coding we will concatenate the number of words from right to left as in Arabic. We simply concatenate, from right to left, the number of words in each verse considering all the 6348 verses. I provide the code to reproduce as below.

```

x<- unQuran11
tmp <- x$vwords
head(tmp)

## [1] 4 4 2 3 4 3

```

```

tail(tmp)

## [1] 4 2 2 4 5 3

tmpr <- rev(tmp)
tmpr <- paste0(tmpr, collapse = '')
as.bigz(tmpr) %% 19

## Big Integer ('bigz') :
## [1] 0

cat("number of digits on this big number is", nchar(tmpr))

## number of digits on this big number is 9692

```

Here is the 9692 digits length big number, in which, when we rewrite the text v.1.1 by replacing the number of words with each verse of the 6348 verses, the resulting big number is multiple of 19.
